

December 13, 2021

Mr. Myles Bartos  
On-Scene Coordinator  
U.S. Environmental Protection Agency, Region 3  
1650 Arch Street  
Philadelphia, Pennsylvania 19103

**Subject:** **Air Monitoring Report for October 19 to 28, 2021, Revision 0**  
**11184 Bristol Air Site, Bristol, Virginia**  
**EPA Contract No. 68-HE-0320-D0003**  
**Technical Direction (TD) No. T601-21-05-004**  
**Document Tracking No. 0294**

Dear Mr. Bartos:

Tetra Tech, Inc. (Tetra Tech) is submitting the enclosed Air Monitoring Report for October 19-28, 2021, Revision 0 for the 11184 Bristol Air Site, Bristol, Virginia for your review and approval.

If you have any questions regarding this report, please contact me by office phone at [REDACTED], cell phone at [REDACTED], or e-mail at [REDACTED]

Sincerely,

A large black rectangular redaction box covering several lines of text.

Project Manager

## **1.0 INTRODUCTION**

Under the Superfund Technical Assessment and Response Team (START) Contract No. 68-HE-0320-D0003, Technical Direction (TD) No. T601-21-05-004, U.S. Environmental Protection Agency (EPA) Region 3 tasked Tetra Tech, Inc. (Tetra Tech) to provide technical assistance in preparing an air monitoring plan (AMP), conducting air monitoring, and calibrating instruments as necessary at the 11184 Bristol Air Site (the Site) in Bristol, Virginia and Bristol, Tennessee (Appendix A, Figure 1). The purpose of the air monitoring efforts was to: (1) investigate areas where odor complaints had been received to determine if hazardous substances were present and associated with the odors; (2) determine levels or concentrations of hazardous substances, if present; and (3) provide data for evaluating and determining locations to collect air samples.

The first round of air monitoring and sampling was conducted at the Site from June 9 to July 22, 2021. Subsequently, EPA decided to conduct a second round of air monitoring and sampling. This report summarizes air monitoring and air sampling activities for the second round of air monitoring and sampling conducted at the Site from October 19 to 28, 2021. Specifically, this report summarizes Site background information in Section 2.0; outlines Site activities and air monitoring results in Section 3.0; and presents analytical results in Section 4.0. References cited in the text are listed in Section 5.0 and figures for this report are provided in the Appendix A. Air monitoring locations and air monitoring results are presented in Appendices B through E. Tabulated analytical results for air samples are presented in Appendix F along with graphs of MultiRAE volatile organic compounds (VOC) monitoring data for the sampling periods. Mobile air monitoring results are provided in Appendix G. Virginia Department of Environmental Quality (VADEQ) air sample information and analytical result data sheets are presented in Attachments 1 and 2. Weather graphs and weather station data are provided in Attachments 3 and 4.

## **2.0 SITE BACKGROUND**

### **2.1 SITE LOCATION AND DESCRIPTION**

The Site is located in Bristol, Virginia and Bristol, Tennessee. The Site consists of a broad area in the eastern portion of the cities of Bristol, Virginia and Bristol, Tennessee where odor complaints have been received from residents (Appendix A, Figure 1).

### **2.2 SITE HISTORY**

VADEQ requested assistance from EPA in conducting air monitoring to investigate areas within Bristol, Virginia and Bristol, Tennessee for which odor complaints have been received. In addition to VADEQ, EPA Region 3 coordinated with other stakeholders including EPA Region 4, the State of Tennessee, both cities of Bristol, and the Agency for Toxic Substances and Disease Registry (ATSDR). All parties provided input and perspective for the Site.

EPA conducted the first round of 24-hour per day air monitoring at six stationary monitoring locations in eastern Bristol, Virginia and Bristol, Tennessee from June 9 to July 22, 2021. VADEQ collected a total of 15 air samples at the stationary air monitoring locations between June 14 and July 7, 2021. The air samples were collected in SUMMA canisters using flow controllers calibrated to collect samples over approximately 8- or 24-hour periods. The air monitoring and air sampling were conducted in areas for which frequent odor complaints had been received. A description of air monitoring sampling activities and results were reported in the “Final Air Monitoring Report for the 11184 Bristol Air Site” (Tetra Tech 2021b). Stationary and mobile air monitoring locations for both the June-July and October are shown in Appendix A, Figure 3.

### **3.0 SITE ACTIVITIES**

From October 19 to 28, 2021, EPA conducted a second round of 24-hour per day air monitoring at stationary monitoring locations in eastern Bristol, Virginia and Bristol, Tennessee in areas for which frequent odor complaints had been received. VADEQ proposed potential locations to conduct stationary air monitoring and sampling for the second round. EPA evaluated the proposed locations and in conjunction with VADEQ, selected three locations. In addition to the locations and frequency of past odor complaints, siting selection criteria included: (1) security of air monitoring equipment; (2) potential sources in the area; (3) availability of 120-volt power supplies for the equipment; (4) potential for human exposure; (5) topography; and (6) geographic coverage of the area.

On October 19, 2021, EPA and the EPA Environmental Response Team (ERT) installed stationary air monitoring equipment at two locations in Bristol, Tennessee and one in Bristol, Virginia. The air monitoring units were calibrated and/or tested prior to deployment at each location. The air monitoring equipment was integrated into the VIPER system, a network-based communications system designed to enable real-time transmission of data from field sensors to local or remote computers or server and provide data management, analysis, and visualization. On the morning of October 20, 2021, EPA and Tetra Tech conducted mobile air monitoring from 0549 to 0639. The mobile air monitoring was conducted using hand-held air monitoring equipment near the stationary monitoring locations and in other areas for which frequent odor complaints had been received. Stationary and mobile air monitoring locations are shown in Appendix A, Figure 2.

Air sampling locations and time periods were determined based on online VIPER air monitoring data and the trends of elevated concentrations detected for monitoring parameters. VADEQ collected a total of seven air samples, including two before EPA commenced the second round of air monitoring. A summary of VADEQ air sampling locations and descriptions is presented in Attachment 1.

Tetra Tech conducted a Site visit on October 24 and 25 to test and recalibrate sensors at the three stationary air monitoring locations and to conduct mobile air monitoring. Mobile air monitoring was conducted using hand-held air monitoring equipment near the stationary air monitoring locations and in other areas for which frequent odor complaints had been received. These air monitoring locations are shown in Appendix A, Figure 2. The stationary air monitoring equipment was taken down at the completion of the air monitoring activities on October 28, 2021. EPA and Tetra Tech also conducted additional mobile air monitoring after the stationary equipment had been removed. Tetra Tech conducted monitoring activities in accordance with

the approved “Final Air Monitoring Plan (AMP) – Addendum 1” (Tetra Tech 2021c) and the “Uniform Federal Policy Quality Assurance Project Plan” for the EPA Region III Superfund Technical Assessment and Response Team (START-6 Contract) (Tetra Tech 2021a).

### **3.1 AIR MONITORING PARAMETERS**

Air monitoring equipment and sensors employed during the second round of air monitoring are presented in Table 1 below.

**TABLE 1**  
**AIR MONITORING EQUIPMENT AND SENSORS**

<b>Monitoring Device</b>	<b>Sensors</b>
MultiRAE Pro (stationary monitoring)	Volatile organic compounds (VOC) by photoionization detector (PID), methyl mercaptan, hydrogen sulfide, sulfur dioxide, and lower explosive limit (LEL)
Honeywell Analytics Single-Point Monitor (SPM) Flex (stationary monitoring)	Hydrides (for hydrogen sulfide), amines (for ammonia), and sulfur dioxide
MultiRAE Pro (mobile monitoring)	VOC by PID, hydrogen sulfide, carbon monoxide, and oxygen
UltraRAE 3000 (mobile monitoring)	VOC as benzene
TVA 2020 (mobile monitoring)	VOC by flame ionization detector (FID)
Meteorological Station (at Location #9)	Temperature, barometric pressure, wind direction/speed, precipitation

Table 2 provides the monitoring parameters, detection ranges, and resolution of each instrument. The detection range is the range of concentrations (high and low) at which a parameter can be detected. The resolution is the increment at which the parameter concentrations are reported on the instrument.

**TABLE 2**  
**AIR MONITORING PARAMETER DETECTION RANGES**

<b>Monitoring Parameter/Instrument</b>	<b>Detection Range</b>	<b>Resolution</b>
Hydrogen sulfide (SPM Flex)	0.000 – 9.999 ppm	0.001 ppm
Ammonia (SPM Flex)	0.00 – 150 ppm	0.01 ppm
Sulfur dioxide (SPM Flex)	0 – 20 ppm	0.1 ppm
VOC (MultiRAE Pro)	0 – 2,000 ppm	10 ppb
VOC as benzene (UltraRAE w/ benzene tube)	0 – 200 ppm	0.01 ppm
VOC by FID (TVA 2020)	0 – 50,000 ppm	0.1 ppm
Methyl mercaptan (MultiRAE Pro)	0 – 10 ppm	0.1 ppm
Carbon monoxide (MultiRAE Pro)	0 – 2,000	1 ppm
Hydrogen sulfide (MultiRAE Pro)	0 – 100 ppm	0.1 ppm
Oxygen (MultiRAE Pro)	0 – 30%	0.1 %

**Notes:**

% = Percent

FID = Flame Ionization Detector

ppb = parts per billion

ppm = parts per million

SPM = Single-Point Monitor

TVA = Toxic Vapor Analyzer

VOC = Volatile Organic Compound

Prior to installing and starting stationary air monitoring equipment, the equipment was tested, calibrated, and/or zeroed, as appropriate. Prior to conducting mobile air monitoring, the instruments were bump-tested, zeroed, and re-calibrated, if necessary. The MultiRAE Pro was bump-tested/calibrated using 100 parts per million (ppm) isobutylene span gas for VOC and zeroed using a zeroing tube. Other sensors installed in the MultiRAE were also bump-tested and re-calibrated if necessary (including those for carbon monoxide, hydrogen sulfide, and oxygen). The UltraRAE 3000 with benzene tube was calibrated using 5 ppm benzene span gas and zeroed using a zeroing tube. The TVA 2020 with flame ionization detector (FID) was calibrated using a 500 ppm methane span gas and zeroed using zero air gas.

## **3.2 AIR MONITORING LOCATIONS**

Air monitoring activities included (1) 24-hour per day air monitoring at three stationary air monitoring locations and (2) mobile air monitoring at a number of other locations in the area for short durations using portable hand-held monitoring equipment. Air monitoring locations are discussed in the following sections.

### **3.2.1 Stationary Air Monitoring Locations**

Stationary air monitoring locations were set up on residential properties in eastern Bristol, Virginia and Bristol, Tennessee. Locations #7 and #8 were in Bristol, Tennessee and Location #9 was in Bristol, Virginia. The stationary air monitoring locations are shown in Appendix A, Figure 2. Air monitoring location numbers, instruments, sensors, instrument identification numbers (ID), geographic coordinates, addresses, monitoring periods, and descriptions of each stationary air monitoring location are presented in Appendix B.

### **3.2.2 Mobile Air Monitoring Locations**

Portable, hand-held air monitoring equipment was used to conduct mobile air monitoring at the stationary air monitoring locations (Locations #7, #8, and #9) during equipment set up and/or in conjunction with the Site visit to test stationary equipment. Mobile air monitoring was primarily conducted in other locations in the general areas for which odor complaints had been received. The mobile air monitoring was normally conducted at night or early in the mornings when odors were frequently reported. These were also the times when odors were most frequently noted by personnel conducting Site visits to set up and test the stationary air monitoring equipment. Hand-held monitoring equipment included: a MultiRAE Pro with a photoionization detector (PID) for VOC, methyl mercaptan, carbon monoxide, hydrogen sulfide, and oxygen sensors; an UltraRAE 3000 PID with a benzene tube; and TVA 2020 with a FID for VOC. The TVA 2020 with an FID sensor cannot detect VOC at the low levels that a MultiRAE Pro can achieve, but it has the ability to detect methane, which cannot be detected using a PID sensor. Tables 1 and 2 present sensor types and detection capabilities and ranges. General areas/locations where mobile/short-term air monitoring was conducted are described below.

Bristol, Virginia locations: Intersection of Whitten Way/Kings Mill Pike; Woodland Circle; near intersection of Kings Mill Pike/Valley Drive; near intersection of Harlow Street/New Hampshire Avenue; Booher Lane; Kings Mill Pike near Northstar Baptist Church; multiple locations along Shakesville Road north of intersection with Kings Mill Pike (including monitoring at storm drain inlets); and multiple locations along Booher Road/Booher Springs Road.

Bristol, Tennessee locations: Florida Avenue between the intersections with Pine Street and Spruce Street (including at storm water inlets and sewer manhole cover at intersection of Florida Avenue/Spruce Street); Sparkling Brook Drive/Spanish Oak Drive; Fire Station #2 on Kings Mill Pike; intersection of Taylor Street/Georgia Avenue (including storm water inlet); and multiple locations along Booher Road/Booher Springs Road.

Mobile air monitoring was conducted at one or more of the above locations on the following dates in October 2021: 20, 24, 25, 27, and 28. Mobile air monitoring locations and results are presented in Appendix G.

### **3.3 AIR MONITORING RESULTS**

Air monitoring results are overviewed in Sections 3.3.1 and 3.3.2 below. More detailed discussions of air monitoring results and graphical presentations of the data for the individual stationary air monitoring locations are presented in Appendices C through E. Some of the air monitoring parameters were for specific chemical compounds such as hydrogen sulfide, sulfur dioxide, and ammonia. However, air monitoring for VOC using a PID measures the approximate total concentration for a large number of VOC based on calibration of the instrument with isobutylene calibration gas. The PID does not differentiate or identify specific chemical compounds and the measured concentrations could differ from the actual concentrations due to differing response factors of individual compounds relative to isobutylene. Therefore, air monitoring data for total VOC using the PID is considered to be “screening data.” Screening data can support an intermediate or preliminary decision but should be supported by “definitive data” before a project is complete (EPA 2005). Quality assurance procedures were incorporated into the mobile air monitoring activities, such as calibration, zeroing, bump testing, and recalibration as needed; however, these procedures are not as extensive as the quality assurance/quality control (QA/QC) procedures applied for laboratory analysis of air samples by EPA Method TO-15. The VADEQ laboratory analytical results for VOC using EPA Method TO-15 are considered definitive data. Definitive data are held to more rigorous quality standards and are used to make final decisions. In general, definitive data refers to analytical data of known quality, concentration, and level of uncertainty, and those levels of quality and uncertainty are consistent with the specifications for the decision to be made (EPA 2005). As mentioned previously, the stationary air monitoring data were applied to help guide where and when VADEQ would collect air samples for laboratory analysis (in addition to monitoring for trace levels of hydrogen sulfide, sulfur dioxide, and ammonia, which could also trigger air sampling).

Air monitoring results in the following sections are reported in ppm or parts per billion (ppb). Parts per million is the number of units of mass of a contaminant per million units of total mass in air or other environmental media. One ppm equals 1,000 ppb and 1 ppb equals 0.001 ppm.

### **3.3.1 Stationary Air Monitoring Results**

All three stationary monitoring locations were located on residential properties. All three locations had the same air monitoring instruments and sensors (see Tables 1 and 2). However, the MultiRAE at Location #7 provided VOC data in ppm, while the MultiRAE units at Locations #8 and #9 provided VOC data in ppb. The MultiRAE units also had sensors for monitoring hydrogen sulfide, sulfur dioxide, and lower explosive limit (LEL). There were no detections of LEL above 0 percent (%) at any location during the monitoring period. MultiRAE sulfur dioxide and hydrogen sulfide results are briefly discussed in Appendices C through E; however, SPM flex units also measured sulfur dioxide and hydrogen sulfide and are more accurate with lower detection limits. Therefore, MultiRAE results for these compounds are not presented in this report because SPM units served as the primary monitors for these compounds. A brief discussion of air monitoring results for the stationary air monitoring equipment is presented in the following paragraphs. A more detailed discussion of stationary air monitoring results and graphical presentations of the data are provided in Appendices C through E.

Location #7 was in a residential yard on Sparkling Brook Drive in Bristol, Tennessee. VOC detections up to 0.1 ppm were detected daily through the monitoring period except for October 26 and 28 when there were no detections. The maximum concentration of 1.7 ppm, which occurred as a short-term spike that lasted less than one minute, occurred at 2001 on October 27. The next highest concentration detected was 0.3 ppm on October 24.

Methyl mercaptan was detected at 0.1 ppm on October 20 and again on October 24 and was detected continuously at concentrations of 0.1 ppm or greater from 2120 on the October 24 through the remaining sampling period that ended on October 28. The highest detection level was 0.3 ppm, detected as short-term spikes at 1324 and 1344 on October 25.

Hydrogen sulfide and sulfur dioxide were not detected on the SPM flex units at this location during the monitoring period.

Ammonia was detected on the SPM Flex units on several occasions during the monitoring period. The maximum concentration detected was 0.36 ppm at 0942 on October 20. Daily peak ammonia detections for the remaining period ranged from 0.02 ppm on October 22 to 0.16 ppm on October 25. A more detailed discussion of air monitoring results and graphical presentation of the data for Location #7 are provided in Appendix C.

Location #8 was in a residential yard near the intersection of Florida Avenue and Spruce Street in Bristol, Tennessee. VOC detections occurred continuously from October 19 at 1350 until October 25 at 2249. The highest concentrations were detected soon after startup on October 19 through 1212 on October 20. These higher levels are attributable to the tubing being disconnected from the MultiRAE; therefore, levels inside the Pelican case were monitored during that time frame. VOC concentrations dropped back to 0 ppb initially after the tubing was reconnected. However, the VOC levels subsequently began to increase again but to much lower levels than were observed while the tubing was disconnected. After reconnecting the tubing, VOC levels generally remained at or below 100 ppb, with a few short-term spike detections up to 2249 on October 25. There were no VOC detections from October at 2329 to October 27 at 2117 and from October 27 at 2117 through the end of the monitoring period on October 28. Daily peak concentrations after the MultiRAE tubing was reconnected ranged from 90 ppb on October 22 to 410 ppb on October 23. There were no VOC detections observed on October 26 or 28. Methyl mercaptan was detected continuously from October 20 at 1226 to October 24 at 1903 at concentrations ranging from 0.1 to 0.3 ppm. The peak concentration of 0.3 ppm was observed on October 20 from 1258 to 1800. The only other detection was a short-term spike at 0.1 ppm on October 25 at 1407.

Hydrogen sulfide was detected sporadically by the SPM Flex unit throughout the monitoring period, with detections generally occurring in late evening and almost continuously until the following morning. Daily peak concentrations of hydrogen sulfide ranged from 0.003 ppm on October 28 to 0.017 ppm on October 20. There were no detections of hydrogen sulfide on October 26 and from October 21 at 0808 to October 24 at 2138.

Ammonia was detected by the SPM Flex unit throughout much of the monitoring period, with concentrations generally between 0.01 to 0.02 ppm, with sporadic periods of elevated levels. The maximum concentrations detected were 0.52 ppm at 0952 on October 20 and 0.35 ppm at 1023 on October 27. Other daily peak detections ranged from 0.01 ppm on October 23 and 0.08 ppm on October 25.

Sulfur dioxide was not detected by the SPM Flex unit at this location during the monitoring period. A more detailed discussion of air monitoring results and graphical presentation of the data for Location #8 are provided in Appendix D.

Location #9 was in a residential yard on Booher Springs Road in Bristol, Virginia. There were no VOC detections during the monitoring period at Location 9.

Methyl mercaptan was detected at low levels ranging from 0.1 ppm to 0.3 ppm almost continuously from October 19 at 1538 until October 21 at 0022. Subsequently, methyl mercaptan was only periodically detected at 0.1 ppm for the remainder of the monitoring period. The peak concentration detected was 0.3 ppm on October 19. There were no detections on October 22 or from October 25 through 28.

Hydrogen sulfide was detected by the SPM Flex unit daily throughout the monitoring period (except for October 26). In general, detections normally began in late evenings between 2000 and 2130 and continued into the next morning, ending between 0930 to 1100. The maximum concentration detected was 0.025 ppm, which occurred at 2226 on October 24. Other daily peak concentrations ranged from 0.002 ppm on October 22 to 0.023 ppm on October 19.

Ammonia was detected almost continually by the SPM Flex unit from 0951 to 1133 on October 20, with a peak concentration of 0.44 ppm detected at 0954. Ammonia was not detected at any other time during the monitoring period at this location.

Sulfur dioxide was not detected at this location during the monitoring period. A more detailed discussion of air monitoring results and graphical presentation of the data for Location #9 are provided in Appendix E.

### **3.3.2 Mobile Air Monitoring Results**

Mobile air monitoring conducted with the MultiRAE Pro identified only low concentrations of VOC detections (10 to 30 ppb). Odors were normally detected when the VOC readings above zero were identified, but VOC readings of zero were frequently identified even when significant odors were noted. There were no MultiRAE detections for hydrogen sulfide (measuring to 0.0 ppm) or carbon monoxide (measuring to 0 ppm) and all readings for oxygen were 20.9%. Mobile air monitoring for benzene with the UltraRAE 3000 (with a benzene tube) yielded no detections (measuring to 0.00 ppm). FID VOC readings

above background were identified on several occasions. On October 25, FID VOC readings were identified on Booher Springs Road in Virginia (near Location #9) at 12.7 ppm, at Fire Station #2 on King College Road in Tennessee at 8.8 ppm, and on Shakesville Road in Virginia at 4 ppm. Odors were also not at these locations. On October 27, FID VOC readings up to 4 ppm were identified along Booher Springs Road, near the Virginia – Tennessee state line and along Florida Avenue near Spruce Street in Tennessee, including measurements at storm water drain inlets and a sewer manhole cover near the intersection of Florida Avenue and Spruce Street. On the morning of October 28 between 0918 and 1007, the EPA On-Scene Coordinator (OSC) and Tetra Tech conducted air monitoring along Shakesville Road in Virginia, between the intersection of Shakesville Road and Kings Mill Pike. The highest FID reading for ambient air was documented near 2125 Shakesville Road at 20 ppm. The ambient air FID concentrations varied between 3 to 6.5 ppm, with the 6.5 ppm reading identified near the storm water inlet across from the Bristol, Virginia Public Works facility. FID readings were also documented at the headspace of storm water inlets beginning at the inlet across the road from the Public Works facility and proceeding downgradient to Kings Mill Pike. The highest storm inlet FID reading was 800 ppm at the inlet across the street from Public Works facility and the second highest reading was 250 ppm at the next inlet downgradient (northward). The remaining downgradient inlets had FID readings at ambient air background levels in the area (3 to 4 ppm).

### **3.4 VADEQ AIR SAMPLING**

During a conference call on June 14, 2021 before the first round of air monitoring and (attended by the EPA OSC, ERT, VADEQ, ATSDR, and Tetra Tech), it was determined that air sampling would be conducted based on continued monitoring of online VIPER air monitoring data and observations of trends of detections of elevated concentrations of air monitoring parameters. VADEQ air sampling include (1) two air samples that it collected before EPA's second round of air monitoring and sampling and (2) five samples collected concurrent with EPA's second round of air monitoring.

Two Samples from September 30 to October 2, 2021: VADEQ collected two air samples before EPA began its second round of air monitoring on October 19. The air samples were collected in SUMMA canisters using flow controllers calibrated to collect samples over approximately 24-hour periods. VADEQ collected the first sample from September 30 to October 2 (a 29 hour, 40 minute sample) at Location #6 (sample #543). VADEQ collected a second sample on Taylor Street, near the Maryland Avenue intersection in Bristol, Tennessee (sample #522) from October 1 to 2 (a 29 hour, 44 minute sample).

Five Samples from October 20 to 28, 2021: VADEQ collected five air samples at stationary air monitoring Locations #8 and #9 concurrent with EPA's second round of sampling. Three air samples were collected at

Location #8 and two at Location #9. The air samples were collected in SUMMA canisters using flow controllers calibrated to collect samples over approximately 8- or 24-hour periods. The actual sample collection periods for these samples ranged from 8 hours 17 minutes to 27 hours 42 minutes for these samples.

Specific information on the VADEQ air samples is presented in Attachment 1, including the sampling locations, SUMMA canister serial numbers, start and stop times of the samples, and sampling duration. The samples were analyzed for VOC using EPA Method TO-15 by the Commonwealth of Virginia Division of Consolidated Laboratory Services (DCLS) in Richmond, Virginia. Laboratory result data sheets for the air samples are provided in Attachment 2. A tabulation of the analytical results is presented in Appendix F.

### **3.5 WEATHER DATA**

START used a Davis Vantage Pro 2 weather station to measure and log localized weather conditions during the air monitoring activities. The weather station logged a number of weather parameters, including: temperature, barometric pressure, wind direction and speed, precipitation, and relative humidity. The data logger was set up to log weather parameters at 15-minute intervals throughout the period from October 19 to 28, 2021. The weather station was placed at stationary air monitoring Location #9. The weather station data is presented in Attachment 4. Graphical presentations of the weather data for the full air monitoring period from October 19 to 28, 2021 are provided in Attachment 3. Graphs of the same data for periods when VADEQ was collecting air samples at Location #9 are also presented in Attachment 3.

## **4.0 ANALYTICAL RESULTS**

VADEQ collected seven air samples (including two samples collected prior to the start of second round air monitoring) and analyzed the samples for VOC by EPA Method TO-15 (see Section 3.4). For this report, samples will be identified based on the SUMMA canister serial number, as SUMMA canister samplers were used only once over the course of this investigation. This section provides a brief summary of analytical results. Complete analytical results are provided in Appendix F and the laboratory data sheets are presented in Attachment 2. Graphs of AreaRAE VOC data for the locations and duration of the respective VADEQ air sampling periods are also presented in Appendix F.

### **4.1 ANALYTICAL RESULTS FOR VADEQ AIR SAMPLES**

Analytical results received from the DCLS were reported in parts per billion volume (ppbv) (Attachment 2). Tetra Tech prepared a table to present the VADEQ data (see Appendix F). The table reports the data in both ppbv and the equivalent concentrations in micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ).

Several petroleum-related constituents were detected in almost all samples, including benzene, toluene, xylenes, ethylbenzene, heptane, and hexane. In addition to being constituents in petroleum products, these chemicals can be produced as products of incomplete combustion (PIC) during fires and from the operation of motor vehicles. Benzene was detected in all the air samples at concentrations ranging from 0.37 ppbv ( $1.18 \mu\text{g}/\text{m}^3$ ) to 9.53 ppbv ( $30.40 \mu\text{g}/\text{m}^3$ ). Toluene was detected in all samples at concentrations ranging from 0.2 ppbv ( $0.75 \mu\text{g}/\text{m}^3$ ) to 1.3 ppbv ( $4.90 \mu\text{g}/\text{m}^3$ ). Ethylbenzene was detected at concentrations ranging from 0.08 ppbv ( $0.35 \mu\text{g}/\text{m}^3$ ) to 1.09 ppbv ( $4.73 \mu\text{g}/\text{m}^3$ ). Xylenes and other petroleum-related compounds were also detected at low concentrations in one or more air samples.

Other compounds that were detected at low concentrations in most or all samples consisted of refrigerant gases, including chloromethane (which is also naturally occurring), dichlorodifluoromethane (also known as, Freon 12), 1,1,2-trichlorotrifluoroethane, and Freon 11 (also known as, trichlorofluoromethane). The respective compounds were detected at similar concentrations in all the samples. Chloromethane was detected at concentrations ranging from 0.22 ppbv ( $0.46 \mu\text{g}/\text{m}^3$ ) to 0.82 ppbv ( $1.70 \mu\text{g}/\text{m}^3$ ). Dichlorodifluoromethane was detected at concentrations ranging from 0.29 ppbv ( $1.44 \mu\text{g}/\text{m}^3$ ) to 0.66 ppbv ( $3.27 \mu\text{g}/\text{m}^3$ ) and Freon 11 was detected at concentrations from 0.16 ppbv ( $0.90 \mu\text{g}/\text{m}^3$ ) and 0.3 ppbv ( $1.69 \mu\text{g}/\text{m}^3$ ).

A number of other compounds were detected in a number of samples, including acrolein, which was detected in five of the seven air samples at concentrations ranging from 0.44 AC1 ppbv ( $1.01 \mu\text{g}/\text{m}^3$ ) to 2.05 ppbv ( $4.69 \mu\text{g}/\text{m}^3$ ). Complete analytical results are presented in Appendix F and in Attachment 2.

The analytical results have been forwarded to ATSDR for evaluation to determine if the concentrations of detected compounds are at levels that may pose a public health concern.

**APPENDIX C**

**AIR MONITORING RESULTS SUMMARY – LOCATION #7**

**APPENDIX C**  
**AIR MONITORING RESULTS SUMMARY – LOCATION #7**  
**11184 Bristol Air Site**  
**Bristol, Virginia**  
**October 19-28, 2021**

**Location # 7**

Start date: October 19, 2021

End date: October 28, 2021

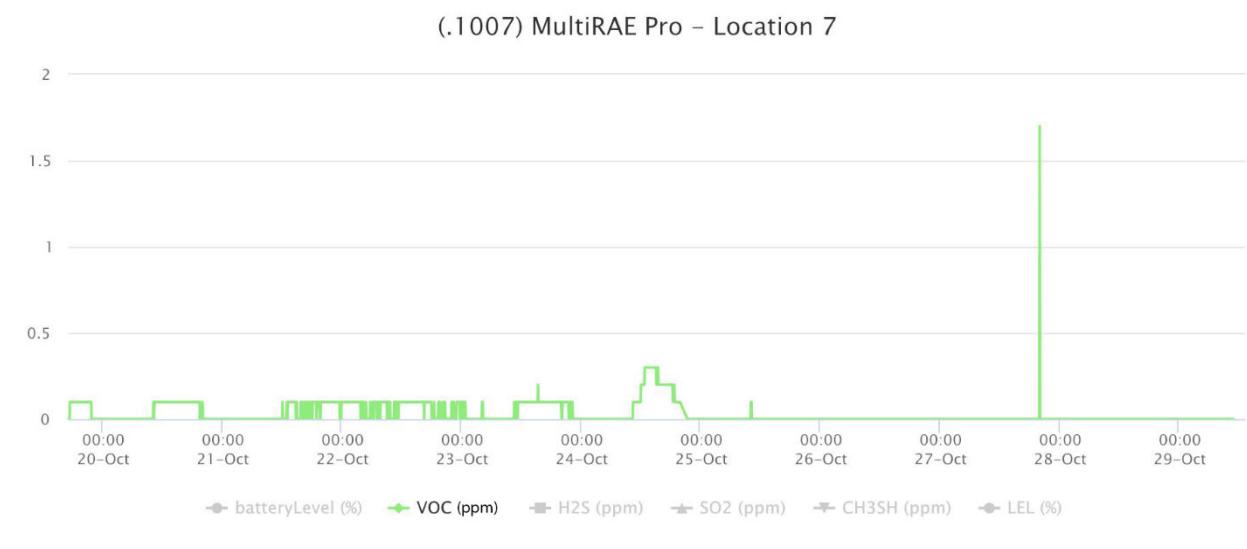

Instruments/Parameters:

- MultiRAE with photoionization detector (PID) for volatile organic compounds (VOC), methyl mercaptan ( $\text{CH}_3\text{SH}$ ), hydrogen sulfide ( $\text{H}_2\text{S}$ ), sulfur dioxide ( $\text{SO}_2$ ), and lower explosive limit (LEL). The MultiRAE was taken off line for bump testing on 10/24/2021 at 1953 and remained off line until 10/24/2021 at 2120.
- Single-Point Monitor (SPM) Flex unit with hydrides chemcassette set to monitor for hydrogen sulfide.
- SPM Flex unit with amines chemcassette set to monitor for ammonia ( $\text{NH}_3$ ).
- SPM Flex unit with sulfur dioxide chemcassette.
- Air monitoring period from 1711 on October 19, 2021 until 0829 on October 28, 2021.

## Air Monitoring Results – October 19 through October 28, 2021

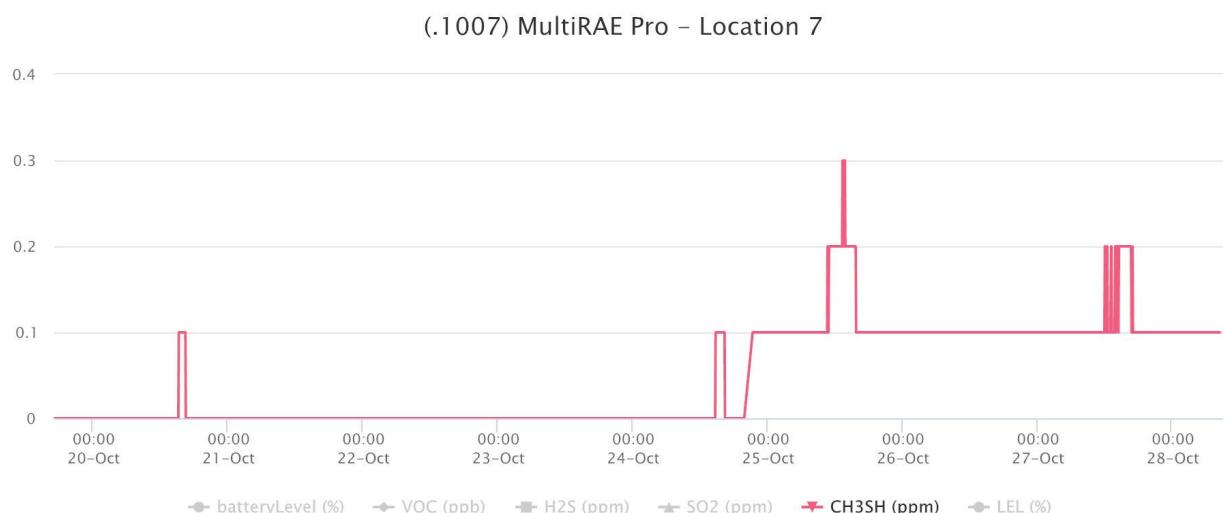

### Location #7 MultiRAE VOC

The MultiRAE at location 7 recorded detections in parts per million (ppm) instead of parts per billion (ppb). The levels shown on the graph below are in ppm. VOC detections up to 0.1 ppm occurred daily through the monitoring period except for 10/26 and 10/28 when there were no detections. Daily peak concentrations were as follows: 0.1 ppm on 10/19/2021 through 10/22/2021; 0.2 ppm on 10/23/2021, which occurred as a short term spike at 1522 and lasted approximately 10 seconds; 0.3 ppm on 10/24/2021; and 1.7 ppm which occurred as a short-term spike that lasted less than one minute at 2001 on 10/27/2021. When Tetra Tech conducted a Site visit on the evening of 10/24/2021, it was discovered that the tubing had become disconnected from the MultiRAE inside the Pelican case where it was staged and the air inside the case had been monitored instead of outdoor ambient air for an unknown amount of time. The tubing was re-connected to the MultiRAE intake before departing the Site on 10/24/2021. A graph of VOC monitoring results is presented below.

### **Location #7 MultiRAE Methyl Mercaptan:**

Methyl mercaptan was not detected on 10/19 or 10/21 through 10/23. Methyl mercaptan was detected on 10/20 at 0.1 ppm from approximately 1516 to 1627. It was detected again at 0.1 ppm on 10/24 and was detected continuously at concentrations of 0.1 ppm or greater from 2120 on 10/24 throughout the remaining sampling period that ended on 10/28. The highest detection level was 0.3 ppm, detected as short-term spikes at 1324 and 1344 on October 25. A graph of the methyl mercaptan monitoring results is presented below.

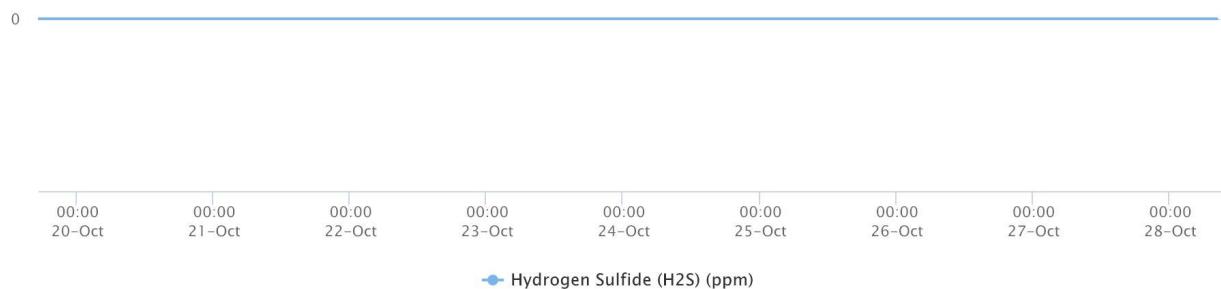

### **Location #7 MultiRAE SO<sub>2</sub>, H<sub>2</sub>S, and Lower Explosive Limit (LEL)**

The MultiRAE also had sensors for monitoring hydrogen sulfide, sulfur dioxide, and LEL. Graphs for sulfur dioxide and hydrogen sulfide are not included because these parameters were monitored using the SPM flex units, which are more accurate and have lower detection limits. There were no detections of hydrogen sulfide and no detections of LEL above 0%. Sulfur dioxide was detected throughout the monitoring period at concentrations between 0.1 to 0.2 ppm. The maximum concentration detected was 0.9 ppm at 20:01 on 10/27. Other detections at concentrations above 0.2 ppm occurred at 0.3 ppm on 10/20 and 10/24 and short term spikes of 0.4 ppm on 10/25 through 10/27.

### **Location #7 SPM Flex - Hydrogen Sulfide:**

Hydrogen sulfide was not detected on the SPM flex unit at this location during the monitoring period. A graph of hydrogen sulfide monitoring data is presented below.

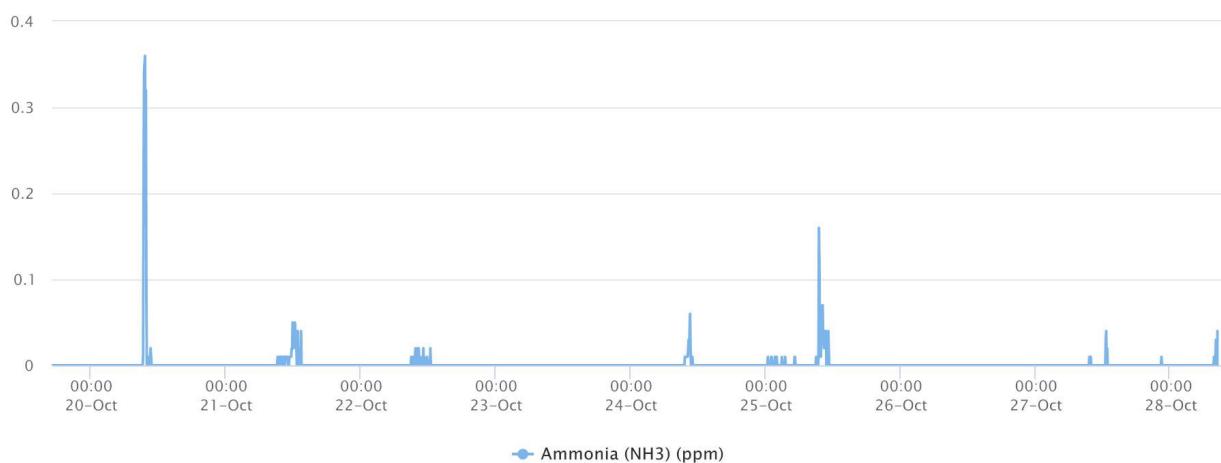

(.111) SPM Flex – Location 7

### **Location #7 SPM Flex - Ammonia:**

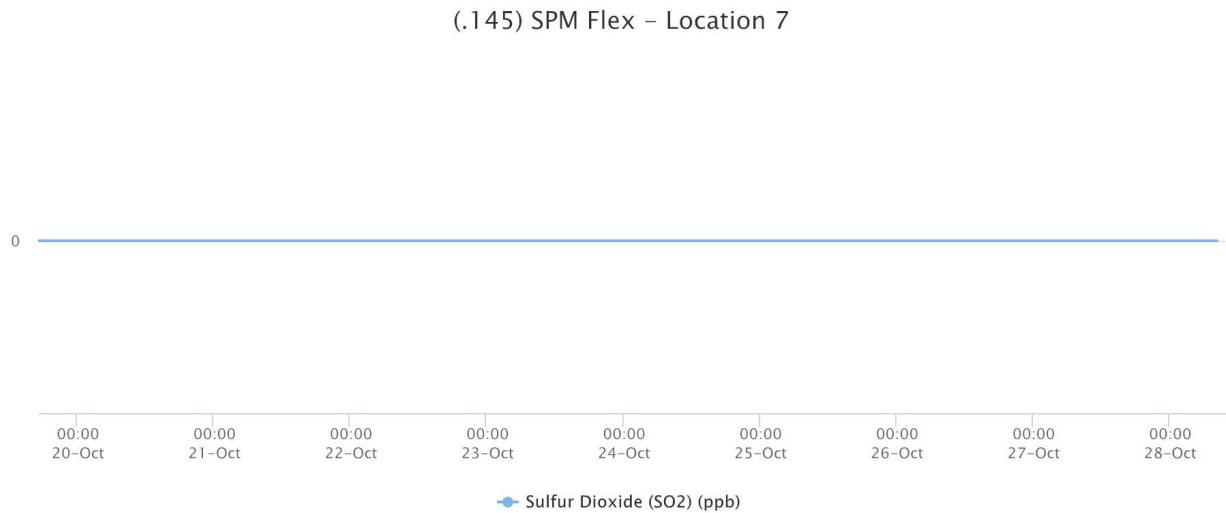

Ammonia was detected on several occasions during the monitoring period. The maximum concentration detected was 0.36 ppm at 0942 on 10/20. Other daily peak detections are as follows: 0.05 ppm at 1156 and 1224 on 10/21; 0.02 ppm at numerous times from 0946 to 1226 on 10/22; 0.06 ppm at 1035 on 10/24; 0.16 ppm at 0934 on 10/25; 0.04 ppm at 1237 on 10/27; and 0.04 ppm at 0828 on 10/28. Ammonia was not detected on 10/19, 10/23, or 10/26. Ammonia monitoring results are presented in the graph below.

(.116) SPM Flex – Location 7

**Location #7 SPM Flex – Sulfur dioxide:**

Sulfur dioxide was not detected at this location during the monitoring period. The graph of sulfur dioxide monitoring results is presented below.

**APPENDIX D**

**AIR MONITORING RESULTS SUMMARY – LOCATION #8**

**APPENDIX D**  
**AIR MONITORING RESULTS SUMMARY – LOCATION #8**  
**11184 Bristol Air Site**  
**Bristol, Virginia**  
**October 19 – October 28, 2021**

**Location # 8**

Start date: October 19, 2021

End date: October 28, 2021

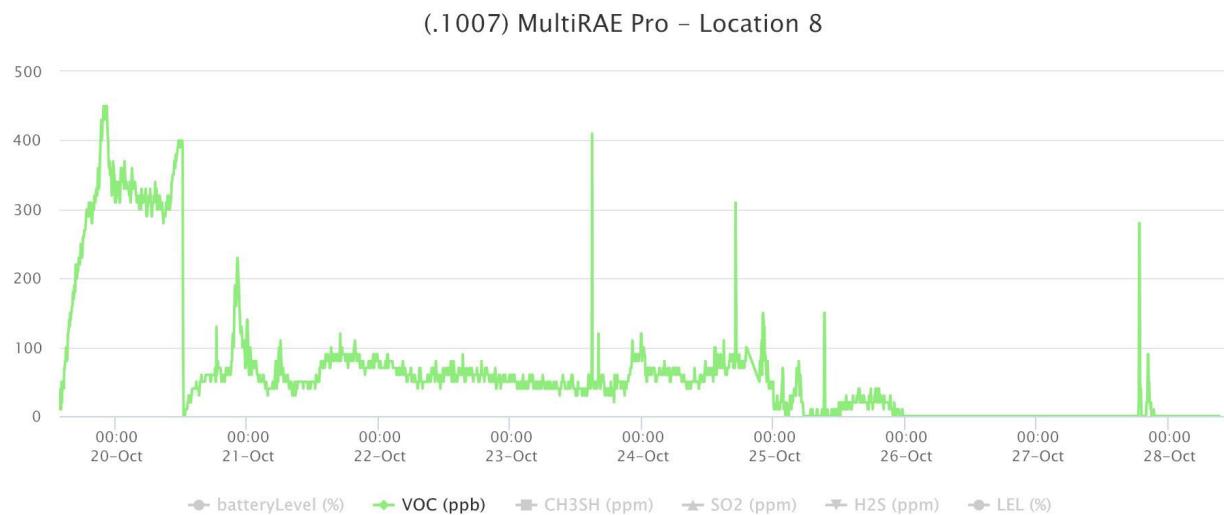

Instruments/Parameters:

- MultiRAE with photoionization detector (PID) for volatile organic compounds (VOC), methyl mercaptan ( $\text{CH}_3\text{SH}$ ), hydrogen sulfide ( $\text{H}_2\text{S}$ ), sulfur dioxide ( $\text{SO}_2$ ), and lower explosive limit (LEL). The MultiRAE was taken off line for bump testing on 10/24/2021 at 1902 and remained off line until 10/24/2021 at 2123.
- Single-Point Monitor (SPM) Flex unit with hydrides chemcassette set to monitor for hydrogen sulfide.
- SPM Flex unit with amines chemcassette set to monitor for ammonia ( $\text{NH}_3$ ).
- SPM Flex unit with sulfur dioxide chemcassette
- Air monitoring period from 1353 on October 19, 2021 to 0921 on October 28, 2021.

## Air Monitoring Results – October 19 through October 28, 2021

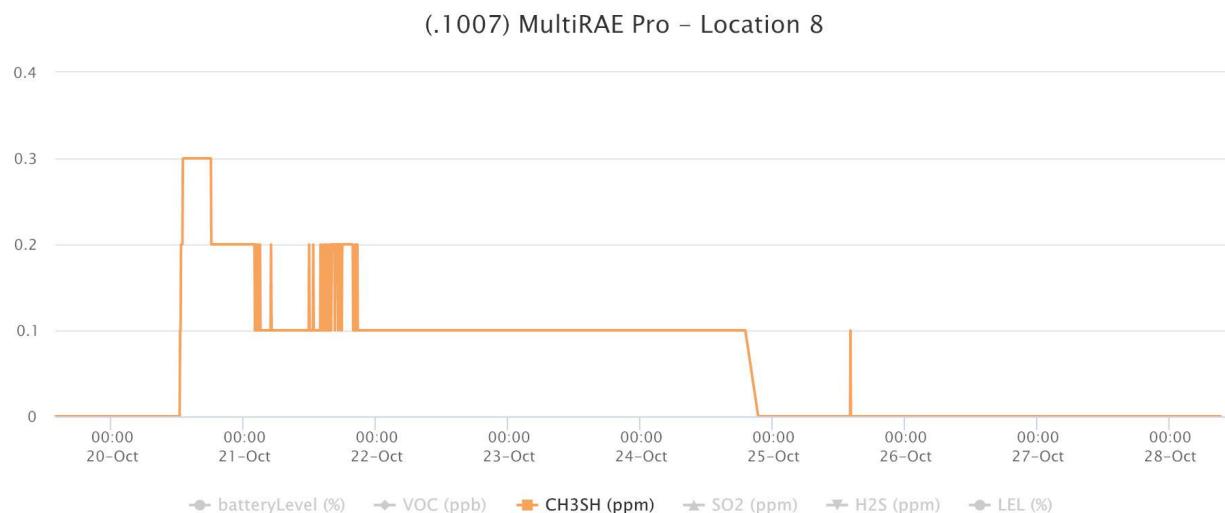

### Location #8 MultiRAE VOC

VOC detections occurred continuously from 10/19 at 1350 until 10/25 at 2249. The highest concentrations were observed from soon after startup on 10/19 to 1212 on 10/20. This was attributable to the tubing being disconnected from the MultiRAE and monitoring levels inside the Pelican case. VOC levels dropped back to 0 parts per billion (ppb) initially after the tubing was reconnected on 10/20. Levels did begin subsequently increasing again, but not to the previous levels (except for a few short-term spikes). After reconnecting the tubing, VOC levels generally remained at or below 100 ppb, with a few short-term spike detections up to 2249 on 10/25. There were no VOC detections from 10/25 at 2329 to 10/27 at 2117 and from 10/27/21 at 2117 through the end of the monitoring period on 10/28 at 0919. Daily peak concentrations after the MultiRAE tubing was reconnected were as follows: 230 ppb at 2210 on 10/20; 140 ppb at 0000 on 10/21; 90 ppb at 0132 on 10/22; 410 ppb at 1450 on 10/23; 310 ppb at 1704 on 10/24; 150 ppb at 0914 on 10/25; and 280 ppb at 1839 on 10/27. There were no VOC detections observed on 10/26 or 10/28. The VOC monitoring results for this location are shown on the graph below.

### **Location #8 MultiRAE Methyl Mercaptan (CH<sub>3</sub>SH)**

Methyl mercaptan was detected continuously at concentrations ranging from 0.1 to 0.3 parts per million (ppm) from 10/20 at 1226 to 10/24 at 1903. The peak concentration of 0.3 ppm was observed on 10/20 from 1258 to 1800. The only other detection was at 0.1 ppm on 10/25 at 1407. The monitoring results for methyl mercaptan are shown on the graph below.

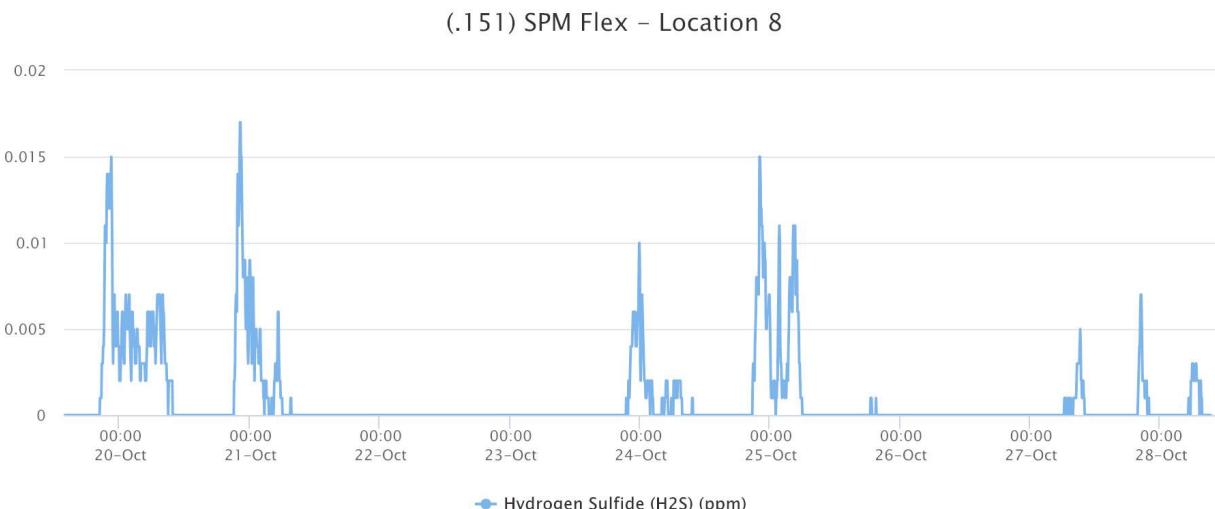

### **MultiRAE LEL, SO<sub>2</sub> and H<sub>2</sub>S Location #8:**

Hydrogen sulfide and sulfur dioxide were monitored using the MultiRAE in addition to the SPM Flex units during this period. The SPM flex units are considered to be more accurate and have lower detection limits and graphs for these MultiRAE parameters are not included in this report. There were no detections of hydrogen sulfide and no detections of LEL above 0% during the monitoring period. Sulfur dioxide was detected continuously throughout the monitoring period at concentrations between 0.1 to 0.2 ppm, except for a few very brief periods of non-detect.

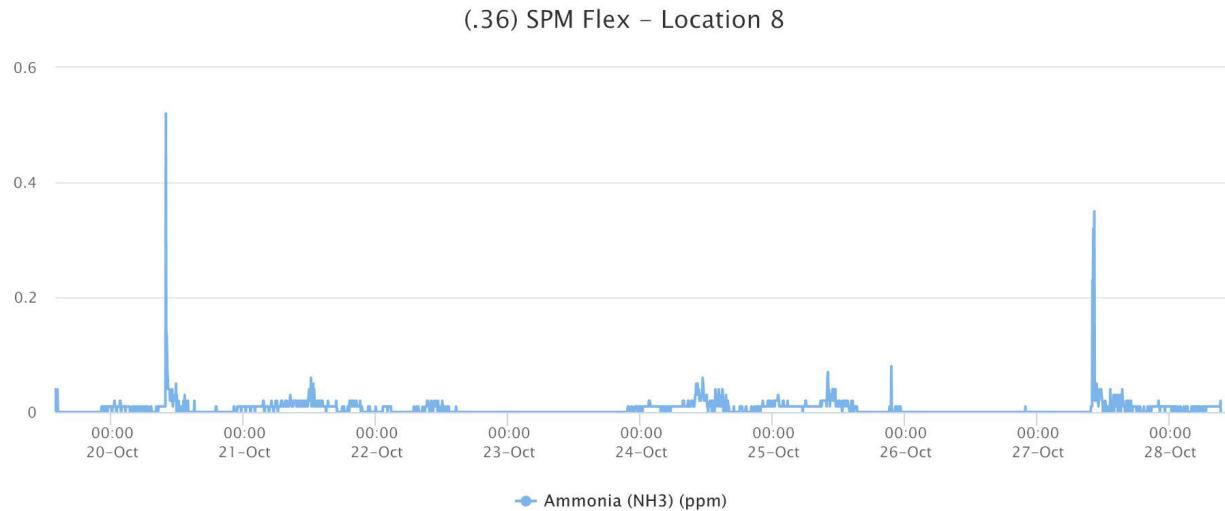

### **Location #8 SPM Flex Hydrogen Sulfide (H<sub>2</sub>S):**

Hydrogen sulfide was detected sporadically throughout the monitoring period, with detections generally occurring in late evening and continuing almost continuously until the following morning. Hydrogen sulfide was detected almost continuously during the following time periods: 2022 on 10/19 to 0943 on 10/20 with a peak of 0.015 ppm at 2215 on 10/19; 2110 on 10/20 to 0556 on 10/21 with a peak of 0.017 ppm at 2215 on 10/20; 2126 on 10/23 to 0742 on 10/24 with a peak at 0.010 ppm at 2353 on 10/23; 2045 on 10/24 to 0552 on 10/25 with a peak of 0.015 ppm from 2204 to 2209 on 10/24; 0616 to 1000 on 10/27 with a peak of 0.005 ppm from 0910 to 0914; 1954 to 2151 on 10/27 with a peak of 0.007 ppm from 2021 to 2026; and 0514 to 0737 on 10/28 with peaks of 0.003 ppm from 0554 to 0601 and 0634 to 0637. There were no detections on 10/26 and from 10/21 at 0808 to 10/24 at 2138. A graph of hydrogen sulfide monitoring results is presented below.

### **Location #9 SPM Flex Ammonia (NH<sub>3</sub>):**

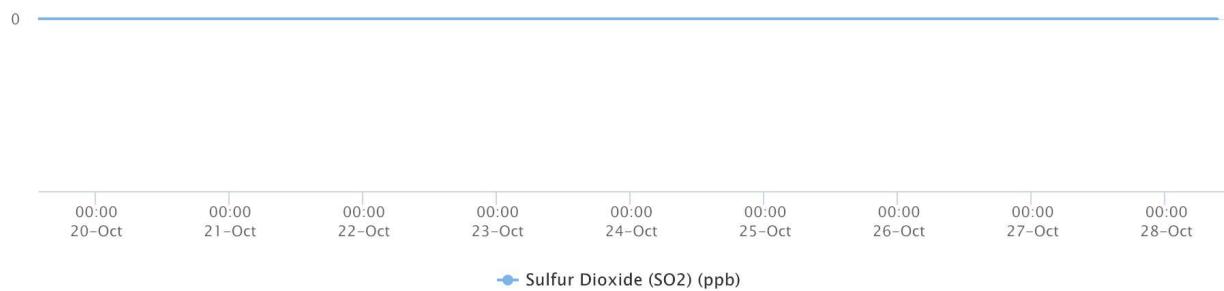

Ammonia was detected throughout much of the monitoring period, with detection levels generally between 0.01 to 0.02 ppm, with sporadic periods of elevated levels. The maximum concentration of 0.52 ppm was detected at 0952 on 10/20. Other daily peak detections were as follows: 0.04 ppm at 1412 on 10/19 (this reading was obtained as the equipment was being set up with the tubing on the ground and may have been due to the frequent presence of the resident's pet dog in the yard area); 0.06 ppm at 1211 on 10/21; 0.02 ppm at several short-term spikes from 0918 to 1200 on 10/22; 0.01 ppm on several occasions from 2141 to 2359 on 10/23; 0.06 ppm at 1115 on 10/24; 0.08 ppm at 2133 on 10/25; 0.01 ppm at 2153 on 10/26; 0.35 ppm at 1023 on 10/27; and 0.02 ppm at 0917 on 10/28. A graph of ammonia monitoring results is presented below.

**Location #8 SPM Flex Sulfur Dioxide (SO<sub>2</sub>):**

Sulfur dioxide was not detected at this location during the monitoring period. A graph showing monitoring results is presented below.

(.148) SPM Flex – Location 8

**APPENDIX E**

**AIR MONITORING RESULTS SUMMARY – LOCATION #9**

**APPENDIX E**  
**AIR MONITORING RESULTS SUMMARY – LOCATION #9**  
**11184 Bristol Air Site**  
**Bristol, Virginia**  
**October 19 – October 28, 2021**

**Location #9**

Start date: October 19, 2021

End date: October 28, 2021

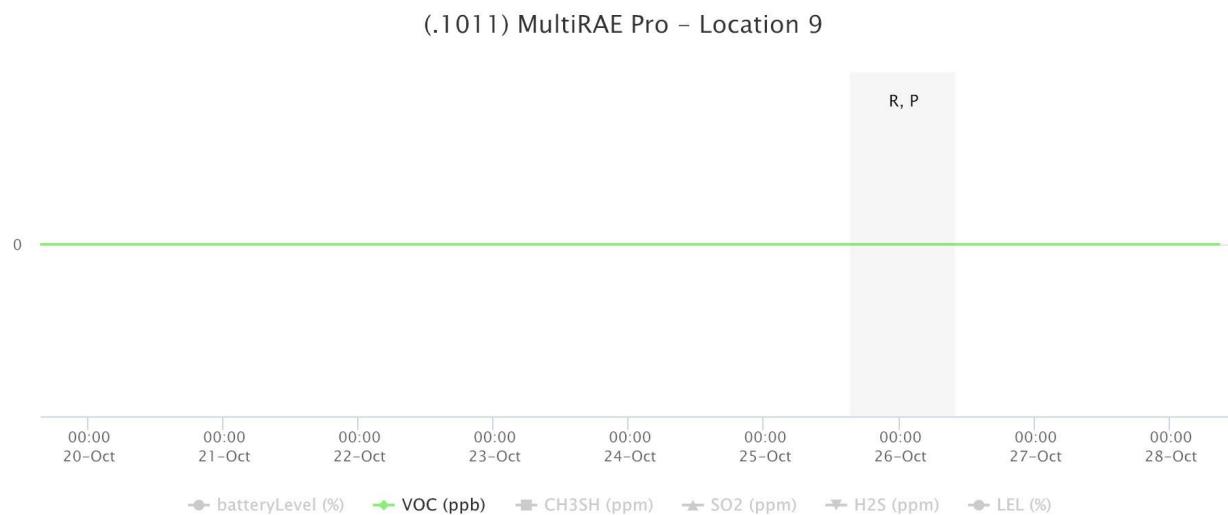

Instruments: Instruments/Parameters:

- MultiRAE with photoionization detector (PID) for volatile organic compounds (VOC), methyl mercaptan ( $\text{CH}_3\text{SH}$ ), hydrogen sulfide ( $\text{H}_2\text{S}$ ), sulfur dioxide ( $\text{SO}_2$ ), and lower explosive limit (LEL). The MultiRAE was taken off line for bump testing on 10/24/2021 at 1834 and remained off line until 10/24/2021 at 2121. The MultiRAE pump failed at 1528 on 10/25/2021 and was off until 0958 on 10/26/2021 when the pump restarted.
- Single-Point Monitor (SPM) Flex unit with hydrides chemcassette set to monitor for hydrogen sulfide.
- SPM Flex unit with amines chemcassette set to monitor for ammonia ( $\text{NH}_3$ ).
- SPM Flex unit with sulfur dioxide chemcassette.
- Air monitoring period from 1511 on October 19, 2021 until 0849 on October 28, 2021.

## **Air Monitoring Results – October 19 through October 28, 2021**

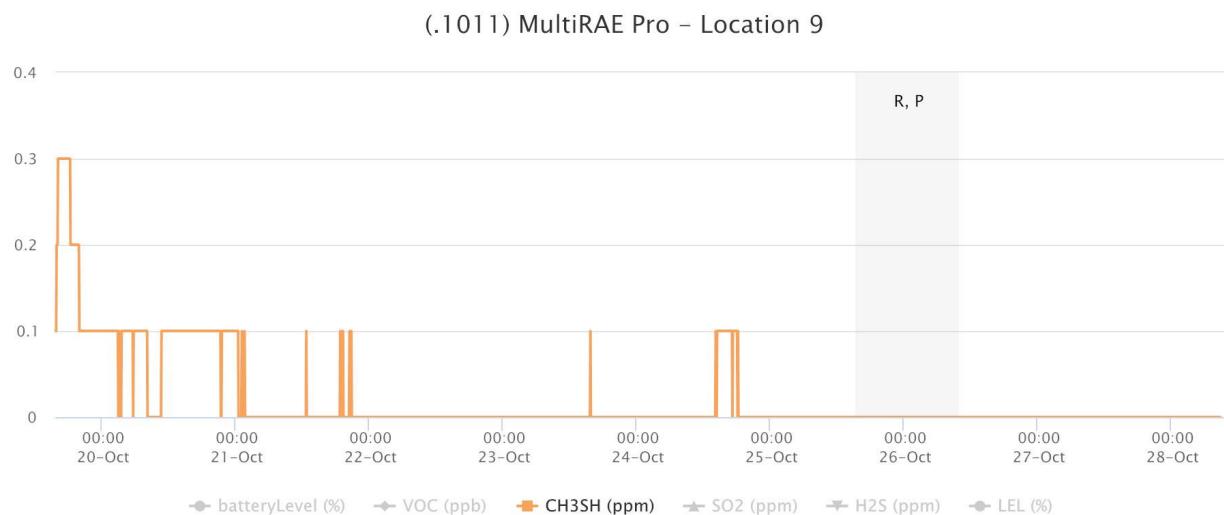

### **Location #9 MultiRAE VOC**

There were no VOC detections during the monitoring period at location 9. The graph of VOC monitoring results is presented below.

### **Location #9 MultiRAE Methyl Mercaptan:**

Methyl mercaptan was detected at low levels ranging from 0.1 parts per million (ppm) to 0.3 ppm almost continuously from 10/19/21 at 1538 until 10/21 at 0022. Subsequently, methyl mercaptan was only periodically detected at 0.1 ppm for the remainder of the monitoring period. The peak concentration detected was 0.3 ppm on 10/19 from 1603 to 1813. There were no detections on 10/22 and 10/25 through 10/28. A graph depicting methyl mercaptan monitoring results is presented below.

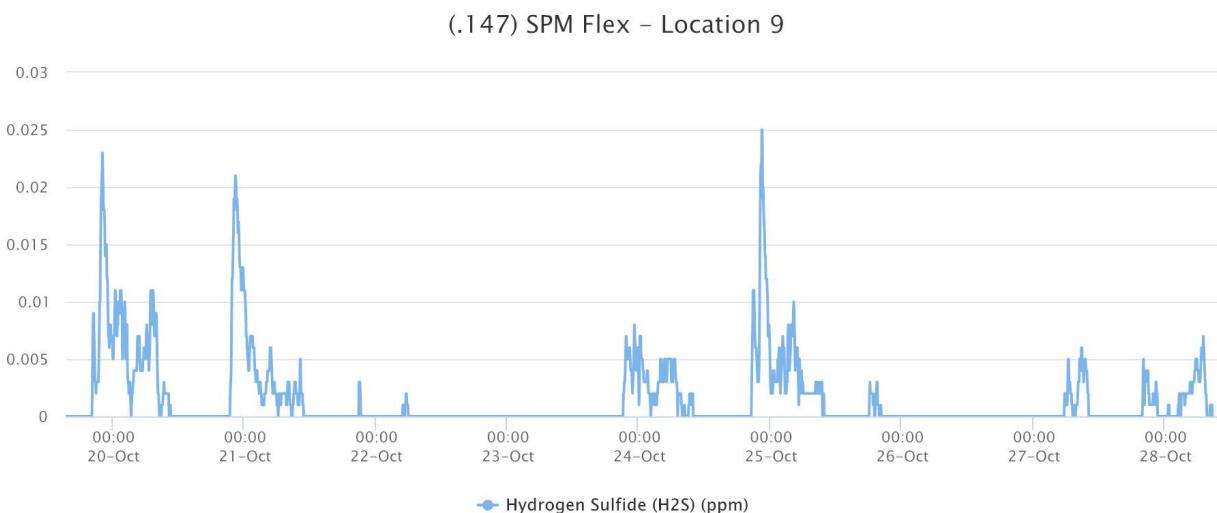

### **Location #9 MultiRAE Hydrogen Sulfide (H<sub>2</sub>S), Sulfur Dioxide (SO<sub>2</sub>), and Lower Explosive Limit (LEL):**

The MultiRAE was also set to record detections of hydrogen sulfide and Sulfur Dioxide. These parameters are not shown on the graphs because SPM Flex units monitoring for the same compounds were set up at this location. The SPM flex units are considered more accurate and have a lower detection levels. There were no detections of hydrogen sulfide and no detections of LEL above 0% during the monitoring period. Sulfur dioxide was detected frequently throughout the monitoring period at 0.1 ppm. The peak detection was 0.2 ppm, a short-term detection that occurred on 10/25 at 14:23.

### **Location #9 SPM Flex Hydrogen Sulfide (H<sub>2</sub>S):**

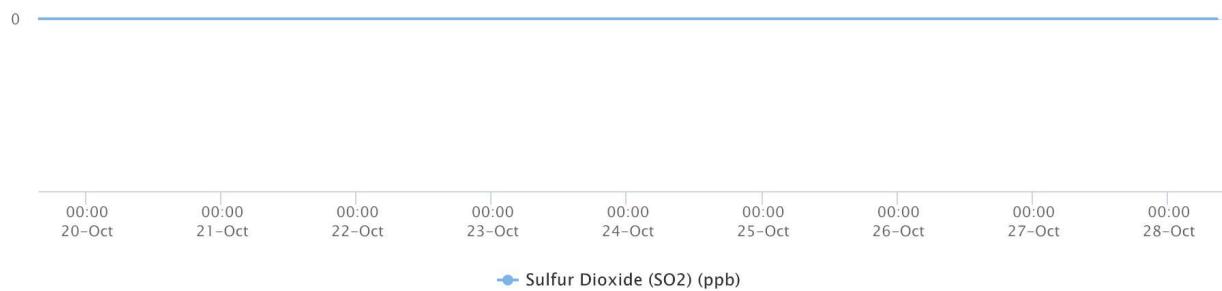

Hydrogen sulfide was detected daily throughout the monitoring period, except for 10/26. In general, detections normally began in late evenings between 2000 and 2130 and continued into the next morning, ending between 0930 to 1100. The maximum concentration detected was 0.025 ppm, which occurred at 2226 on 10/24. Other daily peak concentrations are as follows: 0.023 ppm at 2208 on 10/19; 0.021 ppm from 2221 to 2226 on 10/20; 0.011 ppm at 0000 on 10/21; 0.002 ppm at 0532 on 10/22; 0.008 ppm at 2313 on 10/23; 0.025 at 2230 on 10/24; 0.010 ppm at 0418 on 10/25; 0.006 ppm at 0852 on 10/27; and 0.007 ppm at 0702 on 10/28. Hydrogen sulfide monitoring results are shown on the graph below.

### **Location #9 SPM Flex Sulfur Dioxide (SO<sub>2</sub>):**

Sulfur dioxide was not detected at this location during the monitoring period. A graph showing monitoring results is presented below.

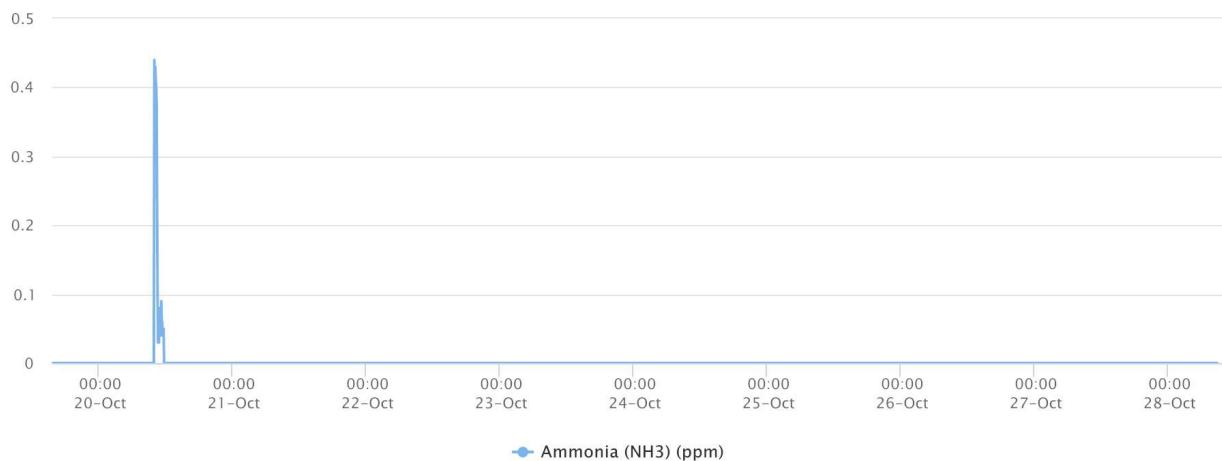

(.162) SPM Flex – Location 9

### **Location #9 SPM Flex Ammonia (NH<sub>3</sub>):**

Ammonia was detected almost continually from 0951 to 1133 on 10/20, with a peak concentration of 0.44 ppm detected at 0954. Ammonia was not detected at any other time during the monitoring period at this location. The ammonia monitoring results shown on the graph below.

(.143) SPM Flex – Location 9

**Table 1 - Summary of VDEQ Analytical Results for Air Samples**

**11184 Bristol Air Site**

**Bristol, Virginia**

**June 15 to July 16, 2021**

**Notes:**

1. Duplicate Lab sample ID numbers on the electronic data deliverable (EDD).

**Key:**

$\mu\text{g}/\text{m}^3$  = micrograms per cubic meter

Hr = hour

ID = Identifier

Min = Minute

No. = Number

ppbv = Parts per billion volume

Q = Qualifier

**Data Validation Qualifiers:**

AC1 - Continuing calibration verification (CCV) recovery was less than the method acceptance limit. Result may be biased low.

AC2 - CCV recovery exceeded the method acceptance limit. Result may be biased high.

AD1 - Relative percent difference (RPD) or absolute difference between duplicate samples exceeded limits.

MD - Reported value less than the method detection limit (MDL). The result should be considered an estimated value.

ND - Analyte was not detected at the sample quantitation limit (SQL)/reporting limit (RL).

SQ - Result was less than the SQL but at or above the MDL. The result should be considered an estimated value.

**ATTACHMENT 1**  
**SUMMARY OF VADEQ AIR SAMPLES**

**ATTACHMENT 1**  
**SUMMARY VADEQ AIR SAMPLES**  
**September 30, 2021 to October 28, 2021**

**• Location 6 Residential:**

- 09/30/2021, 24 hour sampler (Canister #543, K-7 passive sampler) – Sample start time 2005 hours. Sample stop time 0145 hours on 10/02/2021. Total run time 29 hours 40 minutes. This sample was not taken in conjunction with EPA

**• Residential (Taylor Street - TN):**

- 10/01/2021, 24 hour sampler (Canister #522, K-8 passive sampler) – Sample start time 2008 hours. Sample stop time 0152 hours on 10/02/2021. Total run time 29 hours 44 minutes. This sample was not taken in conjunction with EPA.

**• Location 7 - Residential (Sparkling Brook and Spanish Oak, TN)**

- No samples collected.

**• Location 8 - Residential (Florida and Spruce Street, TN)**

- 10/20/21, 8 hour sampler (Canister #332, K-2 passive sampler) – Sample start time 2302 hours on 10/20/21. Sample stop time 0810 hours on 10/21/21. Total run time 9 hours 8 minutes.
- 10/27/21, 8 hours sampler (Canister #542, K-4 sampler) – Sample start time 2236 hours on 10/27/21. Sample stop time 0653 hours on 10/28/21. Total run time 8 hours 17 minutes.
- 10/27/21, 8 hours sampler (Canister #S-186, K-1 sampler) – Sample start time 2256 hours on 10/27/21. Sample stop time 0803 hours on 10/28/21. Total run time 9 hours 7 minutes.

**• Location 9 - Residential (Booher Road)**

- 10/23/21, 24 hour sampler (Canister #346, K-8 passive sampler) – Sample start time 2300 hours on 10/23/2021. Sample stop time 0242 hours on 10/25/21. Total run time 27 hours 42 minutes.
- 10/27/2021, 24 hours sampler (Canister #523, K-7 Passive Sampler) – Sample start time 0920 hours on 10/27/21. Sample stop time 1235 hours on 10/28/21. Total run time 27 hours 15 minutes.

1,2-Dibromoethane		< 0.125 ppbV	43843	11/03/2021
Tetrachloroethylene		< 0.125 ppbV	43817	11/03/2021
Chlorobenzene		< 0.125 ppbV	45801	11/03/2021
Ethylbenzene		0.23 ppbV	45203	11/03/2021
m,p-Xylenes		0.28 ppbV	45109	11/03/2021
Bromoform		< 0.125 ppbV	43806	11/03/2021
Styrene		0.03 ppbV	45220	11/03/2021
PARAMETER QUALIFIER: Value less than MDL; A result reported below the MDL should be considered an estimated value.				
1,1,2,2-Tetrachloroethane		< 0.125 ppbV	43818	11/03/2021
o-Xylene		0.10 ppbV	45204	11/03/2021
PARAMETER QUALIFIER: Value between SQL and MDL; A result reported below the reporting level should be considered an estimated value.				
4-Ethyltoluene		< 0.125 ppbV	45213	11/03/2021
1,3,5-Trimethylbenzene		0.03 ppbV	45207	11/03/2021
PARAMETER QUALIFIER: Value less than MDL; A result reported below the MDL should be considered an estimated value.				

## Explanation of Terms and Disclaimers

Test Results meet all requirements of TNI 2009. Non-TNI 2009 accredited analyses noted by <sup>AA</sup>. The results included on this report relate only to this specific sample and not to other samples tested from this sampling location.

**CONFIDENTIALITY NOTICE:** This report contains PRIVILEGED and CONFIDENTIAL INFORMATION. This report should not be reproduced, except in full, without the written approval of DCLS. If you have received this report in error, please notify DCLS immediately at (804) 648-4480 Ext. 171.
