VRP Site No. 00673
ICOR Project No. 13-CI.001

Dear Mr. Wardle and Mr. Maiden:

Attached for your review is the *Post Site Characterization Monitoring Report* (PSCMR) prepared by ICOR, Ltd. (ICOR) for the Former Robinson Terminal North property (herein referred to as the SITE) located at 500 and 501 North Union Street in Alexandria, Virginia. The PSCMR summarizes the recent new groundwater monitoring well installation and groundwater sampling activities conducted by ICOR at the SITE. The new wells were installed and the first of two planned groundwater sampling events were conducted to further assess soil and groundwater quality and address a Commonwealth of Virginia Department of Environmental Quality directive dated September 18, 2017. The second groundwater sampling event is scheduled for June 2018.

If you have any questions concerning the PSCMR, please feel free to contact me at (703) 608-5969.

Sincerely,

Michael A. Bruzzesi, CPG
Project Manager
VA CPG No. 2801 001428

1.0 INTRODUCTION

This report summarizes the Post Site Characterization Monitoring (PSCM) activities conducted by ICOR, Ltd. (ICOR) at the Former Robinson Terminal North property (herein referred to as the SITE) located at 500 and 501 North Union Street in Alexandria, Virginia. The PSCM activities were conducted on behalf of Alexandria North Terminal, LLC (ANT), a potential developer of the SITE. The PSCM activities conducted included the installation of three new groundwater monitoring wells and the first of two planned groundwater sampling events. The new wells were installed and groundwater was sampled to further assess soil and groundwater quality and address a VDEQ directive dated September 18, 2017. The second groundwater sampling event is scheduled for June 2018.

The directive was associated with VDEQ Pollution Compliant number (PC#) 2016-3090, assigned to the SITE to address a suspect release of petroleum from past storage tanks. When the SITE was assigned the PC#, the VDEQ mandated that a Site Characterization Study (SCS) be conducted to address the suspect release. The SITE was also entered into the VDEQ's Voluntary Remediation Program (VRP) in 2016 and was assigned VRP number 00673. The SITE was entered into the VRP to address non-petroleum impacts, which are not typically addressed through the VDEQ's Petroleum Storage Tank Program (PSTP). The SCS was completed in February 2017 and a Final Site Characterization Report was submitted and accepted in August 2017. The SCS was conducted and the SCR was prepared to satisfy PSTP and VRP SCS and SCR requirements.

The PSCM activities were conducted in conformance with ICOR's VDEQ-approved SCS Work Plan (WP). The PSCM activities were conducted to further evaluate the type, degree, and extent of soil and groundwater impacts and to further evaluate general risks posed by the impacts to current and future site users. The new well locations were selected to evaluate the potential for petroleum migration toward Oronoco Bay and the Potomac River. The new well locations were selected by ICOR and were approved by the VDEQ. The findings of the SCS and follow-up PSCM will be used to develop a remedial approach that allows for successful development of the SITE and minimization of risks to human health and the environment.

The history of the SITE and detailed discussion of the SCS activities and findings were provided in the SCR. This report only details the findings of the new well installation and first groundwater sampling event associated with PSCM.

2.0 BACKGROUND

The SITE is located in a mixed commercial and residential land use area and is currently improved with two vacant warehouses, small shed, railroad spur, paved parking lots, dock (pier), and landscaping. The proposed development of the SITE has not been finalized, but is anticipated to include construction of mixed residential, retail, and/or commercial use multi-story structures and will entail removal of most of the existing structures and features and mass grading and excavation. Based on the findings of past and recent environmental assessments, soil and groundwater beneath the SITE have been impacted by the past use of the SITE, which

included bulk oil storage, fertilizer storage, coal storage, chemical mixing and manufacturing, and warehouse operations. Contributions from adjacent and nearby properties that were used in the past for fertilizer storage, city gas works, chemical manufacturing and mixing, and bulk oil storage are also suspected. Constituents of concern identified at elevated concentrations in soil, groundwater, and soil gas at the SITE include gasoline and diesel range total petroleum hydrocarbons (TPH-GRO and TPH-DRO, respectively), volatile organic compounds (VOCs), semi-VOCs (SVOCs), and metals.

3.0 SITE DESCRIPTION

The SITE is located at 500 and 501 North Union Street in Alexandria, Virginia, at the intersection of Oronoco Street and North Union Street. The SITE is comprised of two parcels, the 500 and 501 North Union Street parcels (herein referred to as the 500 and 501 Parcels, respectively), separated by North Union Street. The two parcels comprise approximately 3.2 acres of land. In past reports, the parcel addresses have also been listed as 1 and 101 Oronoco Street (corresponding to the 500 and 501 Parcels, respectively). A site location map is included as Figure 1. The SITE is situated in a mixed commercial and residential land use area. Adjacent property use is depicted on the aerial photograph included as Figure 2.

The SITE is currently improved with two 1-story, slab-on-grade brick, concrete, and steel warehouses, a large concrete dock (pier), railroad spur, a small wood-frame shed (near the dock), gravel and asphalt and concrete-paved parking areas, and landscaping. The warehouses were constructed in 1966. The warehouse situated on the 500 Parcel is referred to as Warehouse #16. The warehouse situated on the 501 Parcel is referred to as Warehouse #10, #11, and #12. Three diesel underground storage tanks (USTs) were formerly buried on the northeastern portion of the 501 Parcel. The USTs were formerly used to store and dispense diesel fuel via two dispensers located on the east-central portion of the 501 Parcel (next to the small wood shed). The tanks were removed in 2016. A site plan depicting existing conditions is included as Figure 3.

Topography at SITE is relatively flat. The SITE is bound to the north by Pendleton Street and railroad tracks across which is Oronoco Bay Park and Oronoco Bay, to the east and northeast by the Potomac River, to the south by Oronoco Street across which is Founders Park and a residential building, and to the west by Dalton Wharf Office Center and North Union Street.

4.0 POST SITE CHARACTERIZATION MONITORING ACTIVITIES

The PSCM activities recently conducted at the SITE by ICOR included advancement of test borings, installation of new permanent groundwater monitoring wells, and collection of soil and groundwater samples for field screening and laboratory analysis. The PSCM activities were conducted using the same methods and protocols as similar activities proposed in the SCS WP and SCS WP Addendum and were conducted under the direct supervision of a Commonwealth of Virginia Certified Professional Geologist. Photo-documentation of the PSCM activities is included as Attachment 1.

4.1 Test Boring Advancement and Soil Sampling

On January 22, 2018, three test borings were advanced at the SITE in conjunction with new well installation. The borings were advanced on the northern portion of the SITE with one advanced on the 500 Parcel (designated MW-23) and the remaining two advanced on the 501 Parcel (MW-24 and MW-25). The new and historical boring locations are depicted on Figure 4. Soil quality was assessed through the collection of soil samples for visual inspection, field screening, and laboratory analysis. One soil sample was collected for laboratory analysis from each boring from the interval exhibiting the highest degree of impact based on field observations and screening. General boring information, observations made during boring advancement, and types of samples collected is provided on Table 1.

The test borings were advanced using a direct-push sampling rig and were advanced a depth corresponding to approximately 10 feet below the soil/groundwater interface (groundwater table) was encountered. The groundwater table was encountered at all test boring locations at depths ranging from approximately 8 to 10 feet below grade.

Soil samples were collected continuously during advancement of the test borings. In general, bag samples were collected at 2 foot intervals from the soil cores for screening in the field with a photo-ionization (PID). Field screening was performed to check for the presence of volatile organic vapors (VOVs). Observations and field screening readings were recorded on boring logs. Copies of the boring logs are included in Attachment 2. Observations of note such as odors and field screening readings are also summarized on Table 1.

Soil samples were collected for laboratory analysis from soil intervals exhibiting the highest degree of impact and were grab samples. Each sample represented an approximately 1 foot interval of soil. The samples were analyzed for TPH-GRO and TPH-DRO using EPA Method 8015C, Target Compound List (TCL) VOCs using EPA Method 8260B (collected using TerraCore® samplers), and TCL SVOCs using EPA Method 8270C. A list of sampling depths and type of analysis performed on each sample are summarized on Table 1.

All direct-push equipment that came into direct-contact with soil was constructed of steel and was properly decontaminated between boring locations. Decontamination water generated during decontamination of the equipment was contained in a 55-gallon drum and will be properly disposed. Soil generated during advancement of the test borings was also placed in a 55-gallon drum pending proper disposal.

4.2 Well Installation and Groundwater Sampling

Immediately after advancing each test boring, a new permanent well was installed in each boring location. The well designations corresponded to their boring number. The new well locations are depicted on Figure 4. Well construction information for the new wells is provided on Table 2 and boring logs for the wells are included in Attachment 1.

The wells were constructed of new, 1-inch inner diameter polyvinyl chloride well screen and casing. A 15-foot length of well screen was used and was positioned to “straddle” the

soil/groundwater interface. The screen interval was surrounded with a clean sand filter pack. The filter pack was overlain with 2 feet of hydrated bentonite chips and the remaining void was backfilled with grout. The wells were completed with well caps and flush-mount manhole covers anchored in concrete pads.

All wells were properly developed following installation with development consisting of purging a well until a minimum of three well volumes of groundwater were removed and the purge water appeared relatively clear and free of suspended solids (based on a visual inspection). Approximately 1 week following development, groundwater samples were collected for laboratory analysis from the vast majority of the existing and newly-installed permanent wells. Existing wells TEC-MW3 and TEC-MW5 were not sampled and well ECS-MW2 was found to be dry.

Sampling was performed using a peristaltic pump fitted with new, dedicated, and disposable high-density polyethylene tubing. Before sampling each well, the depth to petroleum free product and groundwater was measured to the nearest 0.01 foot from the well's top of casing (TOC) using an oil/water interface probe. The well measurements recorded before sampling the wells are summarized on Table 3. The sample tubing inlet was placed at a depth corresponding to the center of each monitoring well's submerged screen interval. The samples were collected at a low flow rate (less than 250 milliliters per minute) to minimize agitation and aeration. Sampling was conducted in accordance with low-flow purging and sampling protocols recommended by the EPA.

The groundwater samples were collected after field parameters stabilized during purging. The following field parameters were monitored during purging: temperature, pH, specific conductivity, dissolved oxygen (DO), oxygen reduction potential (ORP), and turbidity. All of these parameters were measured using a multi-meter and low volume flow cell. Purging was considered complete when temperature, pH, specific conductivity, DO, ORP, and turbidity readings (an acceptable EPA, subset of parameters) stabilized for a minimum of three consecutive readings. It should be noted that wells TEC-MW2, MiHpt-21, and MiHpt-22 went dry during sampling. Samples were collected from the wells that went dry after they were allowed to recharge. Field parameter readings recorded at stabilization are summarized on Table 4.

The samples were transferred to appropriate sample containers directly from the discharge tubing and were grab samples. The groundwater samples were analyzed for TPH-GRO and TPH-DRO using EPA Method 8015C, TCL VOCs using EPA Method 8260B, and TCL SVOCs using EPA Method 8270C. The type of analysis performed on each sample is summarized on Table 1.

The direct-push sampling equipment that came into contact with soil and/or groundwater, water level meter, and multi-meter were properly decontaminated between well locations. All purge water generated during decontamination, development, and sampling was stored in 55-gallon drums pending proper disposal.

The relative elevations of the new permanent wells TOCs will be surveyed in conjunction with the next groundwater sampling event by a Commonwealth of Virginia-licensed surveyor. The

new wells could not be surveyed following first groundwater sampling event because the 501 Parcel entrance was blocked by a remediation contractor conducting dredging and cleanup at the Oronoco Street outfall. The elevations of existing wells are presented on Table 2.

5.0 SOIL AND GROUNDWATER QUALITY

Soil and groundwater quality were further assessed at the SITE through the collection of samples for visual inspection, field screening, and laboratory analysis and comparison of the analytical results to applicable VDEQ screening levels.

5.1 Soil Quality

Based on observations made during the recent test boring advancement, the upper 4.75 to maximum depth of investigation (19 feet) of the newly assessed portion of the SITE is underlain by fill. The fill varied in composition, with sand, silt, clay, brick, glass, organics, what appeared to be metal cuttings, and gravel noted. Beneath the fill materials, alluvial soil characterized by interbedded and alternating layers of sand, silty sand, and sandy gravel with varying amounts of clay were encountered to a depth 20 feet below grade. Geologic information is summarized on the boring logs included as Attachment 2.

Petroleum odors were noted during advancement of all three test borings. Petroleum odors were noted at depths ranging from 0.5 to 1.5 and 11 to 12.5 feet below grade during advancement of boring MW-23, 18 to 19 feet below grade during advancement of boring MW-24, and 9 to 19 feet below grade during advancement of boring MW-25. Black staining was also observed at depths ranging from 11 to 12 feet below grade during advancement of boring MW-23. It should be noted that the intervals exhibiting petroleum odors did not exhibit elevated PID readings. Soil samples collected for laboratory analysis during advancement of the borings were analyzed for TPH-GRO, TPH-DRO, TCL VOCs, and TCL SVOCs. Observations made during advancement of the borings and a list of sampling depths and type of analysis performed on each sample are provided on Table 1.

The soil analytical results are summarized on Tables 5. A copy of the laboratory report of analysis is included in Attachment 3. The soil analytical results were compared to the most-current VDEQ Tier II residential screening levels for soil (VDEQ-T2RSLs) and VDEQ Tier III industrial screening levels for soil (VDEQ-T3ISLs). TPH concentrations were compared to VDEQ petroleum saturated soil standards (VDEQ-PSSSSs). It should be noted that VDEQ screening levels have not been developed for a few of the target constituents detected.

TPH-GRO, TPH-DRO, 2 VOCs, and 20 SVOCs were detected in the soil samples at concentrations above the analytical method reporting limit (RL). One VOC and 18 SVOCs were detected at concentrations above VDEQ screening levels. No detections of TPH-GRO and TPH-DRO above VDEQ-PSSSSs were noted. A list of the constituents detected above screening levels is detailed below.

Constituents Detected Above VDEQ-T2RSLs

- **Naphthalene** (as a VOC and/or SVOC) was detected above VDEQ-T2RSLs in the soil sample collected from boring MW-23 (from 11.5-12.5 feet below grade).
- **Acenaphthene, Acenaphthylene, Anthracene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Biphenyl (Diphenyl), Dibenz(a,h)anthracene, Dibenzofuran, Fluoranthene, Fluorene, Indeno(1,2,3-c,d)pyrene, Phenanthrene, Pyrene, and 2-Methylnaphthalene** were detected above VDEQ-T2RSLs in the soil sample collected from boring MW-23 (from 11.5-12.5 feet below grade).

Constituents Detected Above VDEQ-T3ISLs

- **Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Biphenyl (Diphenyl), Dibenz(a,h)anthracene, Dibenzofuran, Indeno(1,2,3-c,d)pyrene, and Naphthalene** (as a SVOC only) were detected above VDEQ-T2RSLs in the soil sample collected from boring MW-23 (from 11.5-12.5 feet below grade).

The most significant impacts noted were associated with petroleum odors, black staining, and elevated detections of SVOCs in a relatively thin layer (measuring approximately 1.5 foot in thickness) encountered at a depth of 11 to 12.5 feet below grade at boring location MW-23.

7.3 Groundwater Quality

Based on the recent and historical groundwater measurements obtained from monitoring wells, the depth to groundwater at the SITE ranges from approximately 5 to 11 feet below grade and groundwater flow is to the north-northeast towards Oronoco Bay and the Potomac River. Oronoco Bay and the Potomac River are tidally influenced; however, data collected to date does not suggest that tidal change has a significant effect of groundwater flow. Recent and historical groundwater measurements obtained from the site wells are summarized on Table 3. Groundwater contour generated from the recent groundwater sampling event is depicted on Figure 5.

Petroleum odors were noted during collection of groundwater samples from wells MiHpt-5, MiHpt-7, MiHpt-14, MiHpt-15, MiHpt-20, MiHpt-21, and MiHpt-22. A petroleum sheen was also observed during collection of groundwater samples from wells MiHpt-21 and MiHpt-22. The groundwater samples were analyzed for TPH-GRO, TPH-DRO, TCL VOCs, and TCL SVOCs. The recent and historical groundwater analytical results for these target constituents are summarized on Table 6. A copy of the laboratory report of analysis is included in Attachment 3.

The groundwater analytical results were compared to the most-current VDEQ Tier III residential groundwater vapor intrusion screening level (VDEQ-T3RGSLs), VDEQ Tier III industrial groundwater vapor intrusion screening level (VDEQ-T3IGSLs), and VDEQ Tier III construction direct (<15 feet) screening level (VDEQ-T3CDSLs). The most-recent analytical results were also compared to surface water screening levels including VDEQ general permit discharge standards for petroleum contaminated water (VDEQ-PDSs), VDEQ Tier II public water supply

screening level (VDEQ-T2PWSSLs), and VDEQ Tier II surface water fresh screening level (VDEQ-T2SWFSLs). It should be noted that VDEQ groundwater and surface water screening levels have not been developed for many of the target constituents detected.

TPH-GRO, TPH-DRO, 15 VOCs, and 16 SVOCs were detected in the groundwater samples at concentrations above the RL. TPH-GRO, TPH-DRO, 10 VOCs, and 4 SVOCs were detected at concentrations above VDEQ groundwater and/or surface water screening levels. No detections above VDEQ-T2SWFSLs were noted. A list of the constituents detected above screening levels is detailed below.

Constituents Detected Above VDEQ-T3RGSLS

- **Benzene** was detected above VDEQ-T3RGSLS in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, MiHpt-20, MiHpt-21, MiHpt-22, and MW-25.
- **Chloroform** was detected above VDEQ-T3RGSLS in the groundwater sample collected from well MiHpt-15.
- **Cyclohexane** was detected above VDEQ-T3RGSLS in the groundwater sample collected from well MiHpt-21.
- **Ethylbenzene** was detected above VDEQ-T3RGSLS in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, and MiHpt-21.
- **Naphthalene** (as a VOC and SVOC) was detected above VDEQ-T3RGSLS in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, MiHpt-20, MiHpt-21, MiHpt-22, MW-23, MW-24, and MW-25.
- **Tetrachloroethene (PCE)** was detected above VDEQ-T3RGSLS in the groundwater sample collected from well MiHpt-21.
- **Trichloroethene (TCE)** was detected above VDEQ-T3RGSLS in the groundwater sample collected from well MiHpt-21.
- **Xylenes** were detected above VDEQ-T3RGSLS in the groundwater samples collected from wells MiHpt-5 and MiHpt-7.

Constituents Detected Above VDEQ-T3IGSLs

- **Benzene** was detected above VDEQ-TRIGSLs in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, and MiHpt-21.
- **Cyclohexane** was detected above VDEQ-TRIGSLs in the groundwater sample collected from well MiHpt-21.
- **Naphthalene** (as a VOC and SVOC) was detected above VDEQ-TRIGSLs in the groundwater samples collected from wells MiHpt-5, MiHpt-7, and MW-25.
- **PCE** was detected above VDEQ-TRIGSLs in the groundwater sample collected from well MiHpt-21.
- **TCE** was detected above VDEQ-TRIGSLs in the groundwater sample collected from well MiHpt-21.

Constituents Detected Above VDEQ-T3CDSLs

- **Benzene** was detected above VDEQ-T3CDSLs in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, MiHpt-20, MiHpt-21, MiHpt-22, and MW-25.
- **Chloroform** was detected above VDEQ-T3CDSLs in the groundwater sample collected from well MiHpt-15.
- **Naphthalene** (as a VOC and SVOC) was detected above VDEQ-T3CDSLs in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, MiHpt-20, MiHpt-21, MiHpt-22, MW-23, MW-24, and MW-25.
- **PCE** was detected above VDEQ-T3CDSLs in the groundwater sample collected from well MiHpt-21.
- **TCE** was detected above VDEQ-T3CDSLs in the groundwater sample collected from well MiHpt-21.
- **Xylenes** were detected above VDEQ-T3CDSLs in the groundwater samples collected from wells MiHpt-5 and MiHpt-7.

Constituents Detected Above VDEQ-PDSs

- **TPH-DRO** was detected above VDEQ-PDSs in the groundwater sample collected from well MiHpt-22.
- **Benzene** was detected above VDEQ-PDSs in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, MiHpt-20, MiHpt-21, MiHpt-22, and MW-25.
- **Ethylbenzene** was detected above VDEQ-PDSs in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, and MiHpt-21.
- **Naphthalene** (as a VOC and SVOC) was detected above VDEQ-PDSs in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, MiHpt-20, MiHpt-21, MiHpt-22, MW-23, MW-24, and MW-25.
- **PCE** was detected above VDEQ-PDSs in the groundwater sample collected from well MiHpt-21.
- **TCE** was detected above VDEQ-PDSs in the groundwater sample collected from well MiHpt-21.
- **Xylenes** were detected above VDEQ-PDSs in the groundwater samples collected from wells MiHpt-5 and MiHpt-7.

Constituents Detected Above VDEQ-T2PWSSLs

- **Benzene** was detected above VDEQ-T2PWSSLs in the groundwater samples collected from wells MiHpt-5, MiHpt-7, MiHpt-14, MiHpt-21, and MiHpt-22.
- **PCE** was detected above VDEQ-T2PWSSLs in the groundwater sample collected from well MiHpt-21.
- **2,4-Dichlorophenol** was detected above VDEQ-T2PWSSLs in the groundwater sample collected from well MiHpt-21.

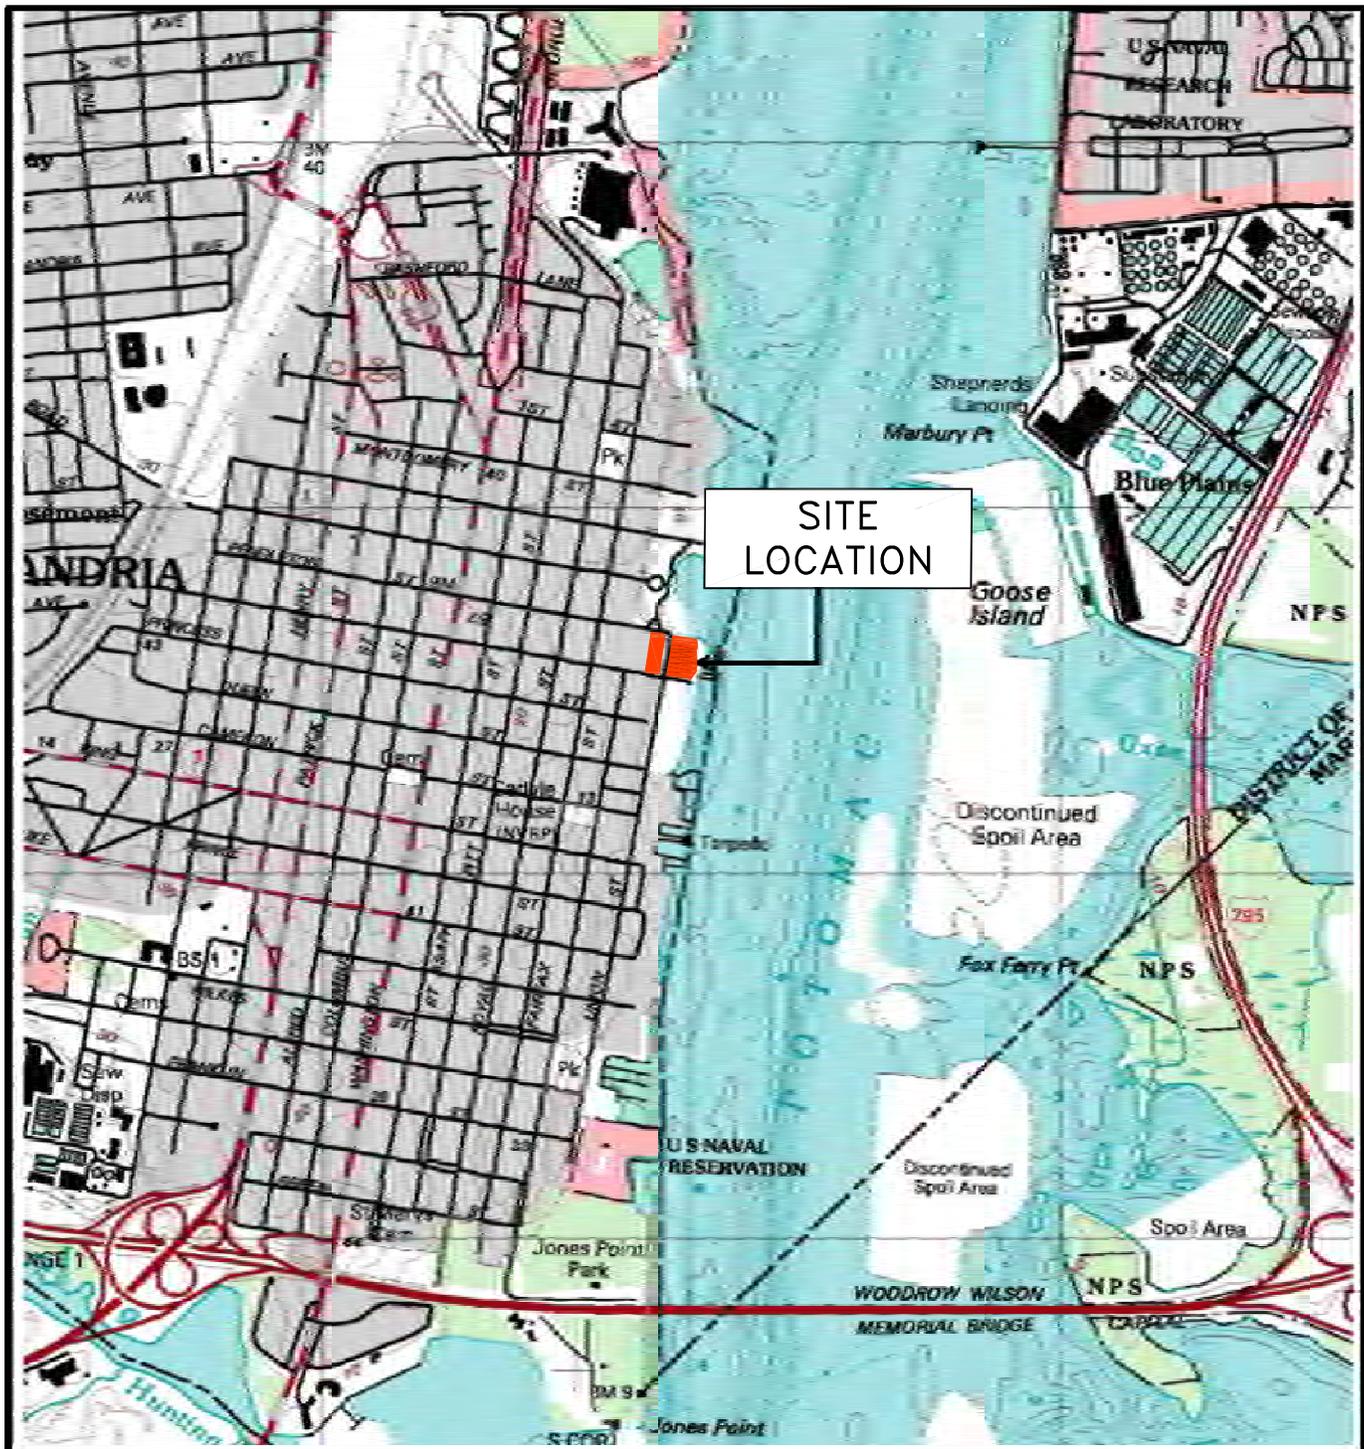

In general, the concentrations of TPH-GRO, TPH-DRO, and VOCs detected in groundwater appear to be relatively stable and the concentrations of SVOCs have decreased over time. The highest concentrations of target constituents detected were on the western and southern portions

of the SITE. Isoconcentration maps prepared from the recent groundwater analytical data for TPH-GRO, TPH-DRO, benzene, and naphthalene are included as Figures 6 through 9.

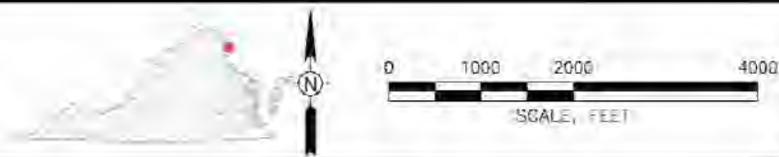

6.0 CONCLUSIONS AND RECOMMENDATIONS

Visual and olfactory evidence of soil impacts in newly-assessed areas of the SITE were noted during implementation of the PSCM activities. Target constituents were also detected in soil and groundwater samples collected from the newly-assessed areas above VDEQ screening levels established for residential and industrial land use and/or surface water. As stated in the SCR, the presence of impacted soil, groundwater, and soil gas warrants remediation, engineering controls, and institutional controls under proposed (future) land use scenario. Remediation, engineering controls, and institutional controls may also be warranted under the current land use scenario; however, further study is required and is being conducted as part of the follow-up PSCM activities. Recommendations made in the SCR will be reassessed and potentially revised or modified pending receipt and evaluation of the analytical data and new well survey data collected during the second PSCM groundwater sampling event (scheduled for June 2018).

NOTES:

(11.5-12.5) = designates depth sample was collected below ground surface
 TPH = total petroleum hydrocarbons
 TPH-DRO = diesel range TPH
 TPH-GRO = gasoline range TPH
 TCL = Target Compound List
 VOCs = volatile organic compounds
 SVOCs = semi-VOCs
 EPA 8260B = United States Environmental Protection Agency SW-846 analytical method
 ug/kg = micrograms per kilogram
 mg/kg = milligrams per kilogram
 <1.0 = not detected above analytical method reporting limit (RL)
 VDEQ-PSS = Commonwealth of Virginia Department of Environmental Quality (VDEQ) petroleum saturated soil standard
 VDEQ-T2RSL = VDEQ Tier II residential screening level
 VDEQ-T3ISL = VDEQ Tier III industrial screening level
 NE = not established
 Bold and right justification designates target compound was detected at a concentration above RL
 Yellow highlighting designates target compound was detected at a concentration above a VDEQ screening concentration in at least 1 sample

Mike Bruzzesi

Icor Ltd.

PO Box 406

Middleburg, VA 20118

Reference: PSS Work Order(s) No: **18012316**

Project Name: RTN

Project Location: Alexandria, VA

Dear Mike Bruzzesi :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **18012316**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on February 27, 2018, with the exception of air canisters which are cleaned immediately following analysis. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

A handwritten signature in black ink that reads 'Dan Prucnal'.

Dan Prucnal

Laboratory Manager

Sample Summary

Client Name: Icor Ltd.
Project Name: RTN

Work Order Number(s): 18012316

The following samples were received under chain of custody by Phase Separation Science (PSS) on 01/23/2018 at 12:30 pm

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
18012316-001	MW-23 (11.5-12.5)	SOIL	01/22/18 09:50
18012316-002	MW-24 (8-9)	SOIL	01/22/18 11:15
18012316-003	MW-25 (9-10)	SOIL	01/22/18 12:10

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].
7. Method 180.1, The Determination of Turbidity by Nephelometry, recommends samples over 40 NTU be diluted until the turbidity falls below 40 units. Routine samples over 40 NTU may not be diluted as long as the data quality objectives are not affected.
8. Alkalinity results analyzed by EPA 310.2 that are reported by dilution are estimated and are not in compliance with method requirements.

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the MDL.
- MDL This is the Laboratory Method Detection Limit which is equivalent to the Limit of Detection (LOD). The LOD is an estimate of the minimum amount of a substance that an analytical process can reliably detect. This value will remain constant across multiple similar instrumentation and among different analysts. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: Icor Ltd.

Project Name: RTN

Work Order Number(s): 18012316

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Matrix spike and matrix spike duplicate analyses may not be performed due to insufficient sample quantity. In these instances, a laboratory control sample and laboratory control sample duplicate are analyzed unless otherwise noted or specified in the method.

Sample Receipt:

All sample receipt conditions were acceptable.

Analytical:

TCL Semivolatile Organic Compounds

Batch: 149951

Samples 18012316-001 and 18012316-003 could not be concentrated to a final volume of one milliliter due to the nature of the sample matrix. The final volume for this sample is five milliliters.

Sample 18012316-001 required a 50X and 250X dilution due to extracts being viscous and dark in color.

Surrogate recoveries affected by sample dilution for 18012316-001.

Benzo-b-fluoranthene and benzo-k-fluoranthene do not meet resolution criteria.

Batch: 149956

Benzo-b-fluoranthene and benzo-k-fluoranthene do not meet resolution criteria.

Surrogate recoveries affected by sample dilution for 18012316-001.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

TOC, DOC (field filtered), COD, Phenols (pH<2) N/A

TOX, TKN, NH3, Total Phos (pH<2) N/A

VOC, BTEX (VOA Vials Rcvd Preserved) (pH<2) N/A

Do VOA vials have zero headspace? N/A

624 VOC (Rcvd at least one unpreserved VOA vial) N/A

524 VOC (Rcvd with trip blanks) (pH<2) N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.

Reference: PSS Work Order(s) No: **18013017**
Project Name: RTN - Robinson Terminal North
Project Location: Alexandria, VA

Dear Mike Bruzzesi :

This report includes the analytical results from the analyses performed on the samples received under the project name referenced above and identified with the Phase Separation Science (PSS) Work Order(s) numbered **18013017**.

All work reported herein has been performed in accordance with current NELAP standards, referenced methodologies, PSS Standard Operating Procedures and the PSS Quality Assurance Manual unless otherwise noted in the Case Narrative Summary. PSS is limited in liability to the actual cost of the sample analysis done.

PSS reserves the right to return any unused samples, extracts or related solutions. Otherwise, the samples are scheduled for disposal, without any further notice, on March 6, 2018, with the exception of air canisters which are cleaned immediately following analysis. This includes any samples that were received with a request to be held but lacked a specific hold period. It is your responsibility to provide a written request defining a specific disposal date if additional storage is required. Upon receipt, the request will be acknowledged by PSS, thus extending the storage period.

This report shall not be reproduced except in full, without the written approval of an authorized PSS representative. A copy of this report will be retained by PSS for at least 5 years, after which time it will be disposed of without further notice, unless prior arrangements have been made.

We thank you for selecting Phase Separation Science, Inc. to serve your analytical needs. If you have any questions concerning this report, do not hesitate to contact us at 410-747-8770 or info@phaseonline.com.

Sincerely,

Dan Prucnal

Laboratory Manager

Sample Summary

Client Name: Icor Ltd.

Project Name: RTN - Robinson Terminal North

Work Order Number(s): 18013017

The following samples were received under chain of custody by Phase Separation Science (PSS) on 01/30/2018 at 12:50 pm

Lab Sample Id	Sample Id	Matrix	Date/Time Collected
18013017-001	TEC-MW2	GROUND WATER	01/29/18 09:15
18013017-002	TEC-MW4	GROUND WATER	01/29/18 08:00
18013017-003	ECS-MW4	GROUND WATER	01/29/18 09:35
18013017-004	MiHpt-5	GROUND WATER	01/29/18 09:55
18013017-005	MiHpt-7	GROUND WATER	01/29/18 10:45
18013017-006	MiHpt-8	GROUND WATER	01/29/18 07:50

18013017-009	MiHpt-20	GROUND WATER	01/29/18 11:30
18013017-010	MiHpt-21	GROUND WATER	01/29/18 11:05
18013017-011	MiHpt-22	GROUND WATER	01/29/18 10:55
18013017-012	MW23	GROUND WATER	01/29/18 11:50
18013017-013	MW24	GROUND WATER	01/29/18 09:00
18013017-014	MW25	GROUND WATER	01/29/18 08:45

Please reference the Chain of Custody and Sample Receipt Checklist for specific container counts and preservatives. Any sample conditions not in compliance with sample acceptance criteria are described in Case Narrative Summary.

Notes:

1. The presence of a common laboratory contaminant such as methylene chloride may be considered a possible laboratory artifact. Where observed, appropriate consideration of data should be taken.
2. Unless otherwise noted in the case narrative, results are reported on a dry weight basis with the exception of pH, flashpoint, moisture, and paint filter test.
3. Drinking water samples collected for the purpose of compliance with SDWA may not be suitable for their intended use unless collected by a certified sampler [COMAR 26.08.05.07.C.2].
4. The analyses of 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane (EDB) by EPA 524.2 and calcium, magnesium, sodium and iron by EPA 200.8 are not currently promulgated for use in testing to meet the Safe Drinking Water Act and as such cannot be used for compliance purposes. The listings of the current promulgated methods for testing in compliance with the Safe Drinking Water Act can be found in the 40 CFR part 141.1, for the primary drinking water contaminants, and part 141.3, for the secondary drinking water contaminants.
5. Sample prepared under EPA 3550C with concentrations greater than 20 mg/Kg should employ the microtip extraction procedure if required to meet data quality objectives.
6. The analysis of acrolein by EPA 624 must be analyzed within three days of sampling unless pH is adjusted to 4-5 units [40 CFR part 136.3(e)].
7. Method 180.1, The Determination of Turbidity by Nephelometry, recommends samples over 40 NTU be diluted until the turbidity falls below 40 units. Routine samples over 40 NTU may not be diluted as long as the data quality objectives are not affected.
8. Alkalinity results analyzed by EPA 310.2 that are reported by dilution are estimated and are not in compliance with method requirements.

Standard Flags/Abbreviations:

- B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- C Results Pending Final Confirmation.
- E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- Fail The result exceeds the regulatory level for Toxicity Characteristic (TCLP) as cited in 40 CFR 261.24 Table 1.
- J The target analyte was positively identified below the reporting limit but greater than the MDL.
- MDL This is the Laboratory Method Detection Limit which is equivalent to the Limit of Detection (LOD). The LOD is an estimate of the minimum amount of a substance that an analytical process can reliably detect. This value will remain constant across multiple similar instrumentation and among different analysts. An LOD is analyte and matrix specific.
- ND Not Detected at or above the reporting limit.
- RL PSS Reporting Limit.
- U Not detected.

Case Narrative Summary

Client Name: Icor Ltd.

Project Name: RTN - Robinson Terminal North

Work Order Number(s): 18013017

Any holding time exceedances, deviations from the method specifications, regulatory requirements or variations to the procedures outlined in the PSS Quality Assurance Manual are outlined below.

The analyses of chlorine, pH, dissolved oxygen, temperature and sulfite for drinking water and non-potable samples tested for compliance have a maximum holding time of 15 minutes. As such, all laboratory analyses for these analytes exceed holding times.

Matrix spike and matrix spike duplicate analyses may not be performed due to insufficient sample quantity. In these instances, a laboratory control sample and laboratory control sample duplicate are analyzed unless otherwise noted or specified in the method.

Sample Receipt:

All sample receipt conditions were acceptable.

NELAP accreditation was held for all analyses performed unless noted below. See www.phaseonline.com for complete PSS scope of accreditation.

PHASE SEPARATION SCIENCE, INC.

QC Summary 18013017

Icor Ltd.

RTN - Robinson Terminal North

Analytical Method: SW-846 8260 B

Seq Number: 150042

Parent Sample Id: 18013017-001

Matrix: Ground Water

MS Sample Id: 18013017-001 S

Prep Method: SW5030B

Date Prep: 01/31/18

MSD Sample Id: 18013017-001 SD

Parameter	Parent Result	Spike Amount	MS Result	MS %Rec	MSD Result	MSD %Rec	Limits	%RPD	RPD Limit	Units	Analysis Date	Flag
o-Xylene	<1.000	50.00	51.76	104	52.64	105	69-126	2	25	ug/L	01/31/18 13:15	

Surrogate	MS Result	MS Flag	MSD Result	MSD Flag	Limits	Units	Analysis Date
4-Bromofluorobenzene	99		99		86-111	%	01/31/18 13:15
Dibromofluoromethane	103		101		91-119	%	01/31/18 13:15
Toluene-D8	98		100		90-117	%	01/31/18 13:15

F = RPD exceeded the laboratory control limits

X = Recovery of MS, MSD or both outside of QC Criteria

H = Recovery of BS,BSD or both exceeded the laboratory control limits

L = Recovery of BS,BSD or both below the laboratory control limits

Sample Receipt Checklist

Work Order # 18013017 **Received By** Barb Weber
Client Name Icor Ltd. **Date Received** 01/30/2018 12:50:00 PM
Project Name RTN - Robinson Terminal North **Delivered By** Trans Time Express
Disposal Date 03/06/2018 **Tracking No** Not Applicable
Logged In By Thomas Wingate

Shipping Container(s)

No. of Coolers 1

Custody Seal(s) Intact? N/A

Seal(s) Signed / Dated? N/A

Ice Present

Temp (deg C) 5

Temp Blank Present No

Documentation

COC agrees with sample labels? Yes

Chain of Custody Yes

Sampler Name Not Provided

N/A

Sample Container

Appropriate for Specified Analysis? Yes

Intact? Yes

Labeled and Labels Legible? Yes

Custody Seal(s) Intact? Not Applicable

Seal(s) Signed / Dated Not Applicable

Total No. of Samples Received 14

Total No. of Containers Received 111

Preservation

Total Metals (pH<2) N/A

Dissolved Metals, filtered within 15 minutes of collection (pH<2) N/A

Orthophosphorus, filtered within 15 minutes of collection N/A

Cyanides (pH>12) N/A

Sulfide (pH>9) N/A

TOC, DOC (field filtered), COD, Phenols (pH<2) N/A

TOX, TKN, NH3, Total Phos (pH<2) N/A

VOC, BTEX (VOA Vials Rcvd Preserved) (pH<2) Yes

Do VOA vials have zero headspace? Yes

624 VOC (Rcvd at least one unpreserved VOA vial) N/A

524 VOC (Rcvd with trip blanks) (pH<2) N/A

Comments: (Any "No" response must be detailed in the comments section below.)

For any improper preservation conditions, list sample ID, preservative added (reagent ID number) below as well as documentation of any client notification as well as client instructions. Samples for pH, chlorine and dissolved oxygen should be analyzed as soon as possible, preferably in the field at the time of sampling. Samples which require thermal preservation shall be considered acceptable when received at a temperature above freezing to 6°C. Samples that are hand delivered on the day that they are collected may not meet these criteria but shall be considered acceptable if there is evidence that the chilling process has begun such as arrival on ice.
